between July 1999 and June 2005 a group of European companies, research institutes and universities executed the Eureka ITEA projects ESAPS, CAFÉ and FAMILIES on the topic of product line engineering. The projects originated from the need of the industry to improve software engineering performance by organizing product development in product lines. The results obtained within the projects have been implemented in several large industries, e.g., automotive, business, medical systems and mobile phones. They involve a radical shift in software construction and production. The most important research results of the projects are collected in this book. Product line engineering was already applied within industry in the 1980s and presumably earlier in the 1980s. Good architects in many telecommunications companies based their architectures on the ideas of David Parnas, who published on the subject of program families. They were facilitated by the CHILL language, widely used by the telecommunications companies. This language deploys the same modularity principles as the modular programming language family. Modularity is a crucial ingredient for implementing systems with a component-based architecture. Being able to compose the products of components is an important mechanism in all product line architectures. In the 1990s, the product line ideas started to gain ground in other industries. Around 1995, the company experiences reached the academia, and since then people in companies and academia have collaborated widely on this subject. The ESAPS, CAFÉ and FAMILIES projects manifest an institutionalized form of this collaboration.

This journal is devoted to all facets of aspect-oriented software development (AOSD) techniques in the context of all phases of the software life cycle, from requirements and design to implementation, maintenance and evolution. The focus is on approaches for systematic identification, modularization, representation and composition of crosscutting concerns, i.e., the aspects, and evaluation of such approaches and their impact on improving quality attributes of software systems.

Since the first edition of the Owner's Manual, Dr. Howard has appeared on Oprah, conducted countless seminars and added new topics and 300 pages of new brain research to the book.
