this book takes a new approach to air navigation extending the classic scope of positioning and guidance to efficient and safe 4d flight trajectory management modern air navigation aims at flight trajectories optimisation there is an infinite number of

solutions to the classic navigation problem of flying from one airport to another but most of them are wasteful of resources and even risky minimising all costs and risks incurred by the 4d flight trajectory makes air navigation both efficient and safe which are key factors in air navigation services beyond minimising fuel burn and co2 efficiency addresses non co2 emissions and noise this is a visually intensive book using examples and case studies to illustrate the concepts the physics of navigation and the mathematical models involved numerical examples reflect its problem solving nature it is useful to aerospace students engineers pilots air traffic controllers technicians and scientists curious about aviation

in everyday life and particularly in the modern workplace information technology and automation increasingly mediate augment and sometimes even interfere with how humans interact with their environment how to understand and support cognition in human technology interaction is both a practically and socially relevant problem the chapters in this volume frame this problem in adaptive terms how are behavior and cognition adapted or perhaps ill adapted to the demands and opportunities of an environment where interaction is mediated by tools and technology the authors draw heavily on the work of egon brunswik a pioneer in ecological and cognitive psychology as well as on modern refinements and extensions of brunswikian ideas including hammond s social judgment theory gigerenzer s ecological rationality and anderson s rational analysis inspired by brunswik s view of cognition as coming to terms with the casual texture of the external world the chapters in this volume provide quantitative and computational models and measures for studying how people come to terms with an increasingly technological ecology and provide insights for supporting cognition and performance through design training and other interventions the methods models and measures presented in this book provide timely and important resources for addressing problems in the rapidly growing field of human technology interaction the book will be of interest to researchers students and practitioners in human factors cognitive engineering human computer interaction judgment and decision making and cognitive science

this handbook serves as a single source for theories models and methods related to cognitive task design it provides the scientific and theoretical basis required by industrial and academic researchers as well as the practical and methodological guidance needed
