- The Nervous System:** The book meticulously details the structure and function of the nervous system, from individual neurons and glial cells to larger brain regions and their interconnections. Detailed diagrams and clear explanations illuminate complex processes like neurotransmission and synaptic plasticity.
- Methods of Biopsychological Research:** A strong emphasis is placed on the scientific methodologies employed in biopsychology. Students learn about various research techniques, including lesion studies, electrical recording, brain imaging (fMRI, PET, EEG), and genetic manipulation, along with their strengths and limitations. Understanding these methodologies is crucial for critically evaluating research findings presented throughout the book.
- Sensory and Motor Systems:** The book delves into the biological mechanisms underlying sensation and perception, exploring the pathways and cortical areas involved in processing visual, auditory, somatosensory, gustatory, and olfactory information. Similarly, motor control mechanisms from the spinal cord to the motor cortex are comprehensively examined.
- Neurochemical Systems:** A significant portion of the book focuses on the intricate roles of neurotransmitters, neuromodulators, and hormones in regulating behavior. The book explores classic and modern neuropharmacological principles, explaining the mechanisms of action of various psychoactive drugs and their impact on the brain and behavior.

The book explores the remarkable plasticity of the nervous system throughout the lifespan, from its development during prenatal and postnatal periods to its capacity for reorganization and recovery after injury.
- Behavioral Neuroscience:** The book integrates neuroscience principles with the study of behavior, exploring various behavioral domains including sleep, eating, emotion, motivation, sexual behavior, and learning and memory. The interplay between biological factors and environmental influences on behavior is highlighted throughout.
