the dog next to the human being ranks highest in the scale of intelligence and was evidently designed to be the companion and the friend of man we exact the services of other animals and the task being performed we dismiss them to their accustomed food and rest but several of the varieties of the dog follow us to our home they are connected with many of our pleasures and wants and guard our sleeping hours the first animal of the domestication of which we have any account was the sheep abel was a keeper of sheep 1 it is difficult to believe that any long time would pass before the dog who now in every country of the world is the companion of the shepherd and the director or guardian of the sheep would be enlisted in the service of man from the earliest known history he was the protector of the habitation of the human being at the feet of the lares those household deities who were supposed to protect the abodes of men the figure of a barking dog was often placed in every age and almost in every part of the globe he has played a principal part in the labours the dangers and the pleasures of the chase in process of time man began to surround himself with many servants from among the lower animals but among them all he had only one friend the dog one animal only whose service was voluntary and who was susceptible of disinterested affection and gratitude in every country and in every time there has existed between man and the dog a connection different from that which is observed between him and any other animal the ox and the sheep submit to our control but their affections are principally if not solely confined to themselves they submit to us but they can rarely be said to love or even to recognise us except as connected with the supply of their wants the horse will share some of our pleasures he enjoys the chase as much as does his rider and when contending for victory on the course he feels the full influence of emulation remembering the pleasure he has experienced with his master or the daily supply of food from the hand of the groom he often exhibits evident tokens of recognition but that is founded on a selfish principle he neighs that he may be fed and his affections are easily transferred
