the cutting edge of scientific reporting progress in inorganic chemistry nowhere is creative scientific talent busier than in the world of inorganic chemistry experimentation progress in inorganic chemistry continues in its tradition of being the most respected avenue for exchanging innovative research this series provides inorganic chemists and materials scientists with a forum for critical authoritative evaluations of advances in every area of the discipline with contributions from internationally renowned chemists this latest volume offers an in depth far ranging examination of the changing face of the field providing a tantalizing glimpse of the emerging state of the science this series is distinguished not only by its scope and breadth but

also by the depth and quality of the reviews journal of the american chemical society this series has won a deservedly honored place on the bookshelf of the chemist attempting to keep afloat in the torrent of original papers on inorganic chemistry chemistry in britain contents of volume 54 atomlike building units of adjustable character solid state and solution routes to manipulating hexanuclear transition metal chalcogenide clusters eric j welch and jeffrey r long doped semiconductor nanocrystals synthesis characterization physical properties and applications j daniel bryan and daniel r gamelin stereochemical aspects of metal xanthene complexes molecular structures and supramolecular self assembly edward r t tiekink and ionel haiduc trivalent uranium a versatile species for molecular activation ilia korobkov and sandro gambarotta comparison of the chemical biology of no and hno an inorganic perspective katrina m miranda and david a wink alterations of nucleobase pka values upon metal coordination origins and consequences bernhard lippert functionalization of myoglobin yoshihito watanabe and takashi hayashi

the field of oxygen activation has attracted considerable interest recently not only because it presents challenges in those fields of basic research that aim to understand the fundamental aspects of chemical and biological reactions that involve dioxygen but also because of its wide range of practical implications in such diverse fields as medicine synthesis of pharmaceuticals and other organic compounds materials science and atmospheric science this is the second of two volumes that focus on the subject of oxygen activation the first slanted toward chemistry and the second toward biological chemistry we planned these volumes to be more general than many monographs of this sort not as detailed summaries of the authors own research but rather as general overviews of the field our choice of topics was strongly influenced by our syllabus for a course entitled oxygen chemistry which two of us have twice taught jointly at ucla definition of important issues horizons and future prospects was an important goal and although totally comprehensive coverage was not possible we believe that we have chosen a representative selection of research topics current to the field we have targeted this work to a diverse audience ranging from professionals in fields from physics to medicine to beginning graduate students who are interested in rapidly acquiring the basics of this field
