contributors thoroughly survey the most important statistical models used in empirical reserch in the social and behavioral sciences following a common format each chapter introduces a model illustrates the types of problems and data for which the model is best used provides numerous examples that draw upon familiar models or procedures and includes material on software that can be used to estimate the models studied this handbook will aid researchers methodologists graduate students and statisticians to understand and resolve common modeling problems

detailed methods of the most widely used and best established animal models and related approaches to the study of rheumatic diseases and their treatment are presented in this major

reference book the detailed description of each model allows the reader to select the model most appropriate for his research and to reproduce the model without resorting to additional references in addition other methods for induction of the model sources for procurement of suitable animals and validation of the model are highlighted methods for eliciting non spontaneous phenomena follow up examinations and data collection are also described specific techniques such as joint injection obtaining synovial tissue methods of assessment and similar non specific information are emphasized this easy to read resource text is essential for scientists graduate students research assistants physicians and other invbestigators who use animal models for the study of rheumatic diseases

master s thesis from the year 2017 in the subject mathematics stochastics grade 1 3 technical university of darmstadt language english abstract this thesis deals with the development of an alpha quantile estimate based on a surrogate model with the use of artificial neural networks using artificial neural networks as an estimate is considered a nonparametric approach the estimation of a specific quantile of a data population is a widely used statistical task and a comprehensive way to discover the true relationship among variables it can be classified as nonparametric regression where it is one of the standard tasks the most common selected levels for estimation are the first second and third quartile 25 50 and 75 percent the quantile level is given by alpha a 25 percent quantile for example has 25 percent of the data distribution below the named quantile and 75 percent of the data distribution above it sometimes the tail regions of a population characteristic are of interest rather than the core of the distribution quantile estimation is applied in many different contexts financial economics survival analysis and environmental modelling are only a few of them
