in part 3 of the trilogy characterising locally finite groups satisfying the strong sylow theorem for the prime  $p$  about the strong sylow theorem for the prime  $p$  in simple locally finite groups the strong sylow theorem for the prime  $p$  in projective special linear locally finite groups we continue the program begun in 10 to optimise along the way 1 its beautiful theorem about the first type an of infinite families of finite simple groups step by step to further types by proving it for the second type a  $psl_n$  we start with proving the conjecture 2 of 10 about the general linear groups over commutative locally finite fields stating that their rank is bounded in terms of their  $p$  uniqueness and then break down this insight to the special linear groups and the projective special linear  $psl$  groups over locally finite fields we close with suggestions for future research regarding the remaining five rank unbounded types the classical groups and the way 2 regarding the locally finite and  $p$  soluble groups and regarding augustin louis cauchy s and Évariste galois contributions to sylow theory in finite groups
