It is divided into 14 chapters, each focusing on a specific area of statistical knowledge. The chapters are further broken down into sections and subsections, facilitating understanding and efficient navigation.

Chapter Breakdown

- 1 The Nature of Statistics** Introduces the fundamental concepts of statistics, including its history, applications, and importance in various fields. This chapter defines key terminology, differentiates between descriptive and inferential statistics, and explores different types of data.
- 2 Frequency Distributions** Explores the organization and summarization of data using frequency distributions, histograms, frequency polygons, and stem-and-leaf plots. This chapter emphasizes visual representation of data for better comprehension.
- 3 Descriptive Measures** Introduces measures of central tendency (mean, median, mode) and measures of dispersion (range, variance, standard deviation). These measures provide insights into the central location and spread of data.
- 4 Probability** Delves into the concept of probability, covering basic probability rules, types of probability, and methods for calculating probabilities. This chapter lays the foundation for statistical inference.
- 5 Probability Distributions** Introduces discrete and continuous probability distributions, including the binomial, Poisson, and normal distributions. These distributions are essential tools for modeling and analyzing random phenomena.
- 6 Estimation and Confidence Intervals** Covers the process of estimating population parameters based on sample data. Students learn to construct confidence intervals for different parameters, providing a range of plausible values for the unknown population value.
- 7 Hypothesis Testing** Introduces the concept of hypothesis testing, a statistical procedure used to test claims about population parameters. This chapter discusses different types of hypotheses, hypothesis testing procedures, and the interpretation of results.
- 8 Hypothesis Testing: Two Samples** Expands on hypothesis testing, focusing on comparisons between two populations. This chapter covers the t-test, z-test, and other relevant statistical tests for comparing means and proportions.
