most ceramics show an increase of the crack growth resistance during crack propagation r curve behaviour reasons for such behaviour are bridging effects between opposite crack surfaces phase transformations around the tip of a crack and development of micro cracking zones this booklet predominantly deals with the bridging behaviour and the discussion of the observed effects in terms of the fracture mechanics weight function procedure

elementary differential equations and boundary value problems 12th edition is written from the viewpoint of the applied mathematician whose interest in differential equations may sometimes be quite theoretical sometimes intensely practical and often somewhere in between in this revision new author douglas meade focuses on developing students conceptual understanding with new concept questions and worksheets for each chapter meade builds upon boyce and diprima s work to combine a sound and accurate but not abstract exposition of the elementary theory of differential equations with considerable material on methods of solution analysis and approximation that have proved useful in a wide variety of applications the main prerequisite for engaging with the program is a working knowledge of calculus gained from a normal two or three semester course sequence or its equivalent some familiarity with matrices will also be helpful in the chapters on systems of differential equations

a novel integrative approach to cities as complex adaptive systems applicable to

issues ranging from innovation to economic prosperity to settlement patterns human beings around the world increasingly live in urban environments in introduction to urban science luis bettencourt takes a novel integrative approach to understanding cities as complex adaptive systems claiming that they require us to frame the field of urban science in a way that goes beyond existing theory in such traditional disciplines as sociology geography and economics he explores the processes facilitated by and in many cases unleashed for the first time by urban life through the lenses of social heterogeneity complex networks scaling circular causality and information though the idea that cities are complex adaptive systems has become mainstream until now those who study cities have lacked a comprehensive theoretical framework for understanding cities and urbanization for generating useful and falsifiable predictions and for constructing a solid body of empirical evidence so that the discipline of urban science can continue to develop bettencourt applies his framework to such issues as innovation and development across scales human reasoning and strategic decision making patterns of settlement and mobility and their influence on socioeconomic life and resource use inequality and inequity biodiversity and the challenges of sustainable development in both high and low income nations it is crucial says bettencourt to realize that cities are not zero sum games and that knowledge human cooperation and collective action can build a better future
