originally published in 1986 this book consists of 100 problems in probability and statistics together with solutions and most importantly extensive notes on the solutions the level of sophistication of the problems is similar to that encountered in many introductory courses in probability and statistics at this level straightforward solutions to the problems are of limited value unless they contain informed discussion of the choice of technique used and possible alternatives the solutions in the book are therefore elaborated with extensive notes which add value to the solutions themselves the notes enable the reader to discover relationships between various statistical techniques and provide the confidence needed to tackle new problems
