interpretative history of the national parks system proposing the establishment of
national parks evolved out of a need to fulfill cultural rather than environmental needs
and examining the problems of maintaining the character and integrity of parks

allin s handbook provides a masterful survey of the parks and the systems whereby
they came into being and are managed or in some cases mismanaged today
throughout spaceship earth there is an audience for this fine book in public and
academic libraries wilson library bulletin this volume fills an important gap in the
national parks literature by providing a unique comparative exploration of global parks
preservation written by a group of distinguished contributors each an expert in his or
her area of coverage the handbook describes and evaluates the national parks and
nature preserves in 25 nations and one regional cluster the nations selected range
from some of the wealthiest and most technologically sophisticated in the world to
some of the least developed and they represent the regional diversity to be found
within each of six continents africa asia australia europe and north and south america
as well as a number of pacific island nations each chapter is written to a common
outline and addresses the history of park preservation in that country the natural
values associated with parks and preserves and the legal and administrative structures

charged with park protection the editor's introduction sets the stage for the chapters that follow by discussing the national park concept and its historical implementation first in individual nations and later by means of international agreements and institutions of the 27 chapters that follow 24 deal comprehensively with the parks and reserves of a single nation and one treats the nine nations of french speaking west africa two chapters address the diverse systems of nature preservation which have been established in the united states one focuses on the traditional national parks while the other examines the recently established wilderness areas within each chapter a section on history describes the major events associated with park preservation a section on the parks and reserves themselves describes the geological historical archaeological biological ecological aesthetic or recreational values designated for protection a third section evaluates the agencies charged with park protection and the pressures and constraints under which they operate each chapter also includes notes and a select bibliography an important acquisition for library collections dealing with conservation this handbook will also be an invaluable reference source for scholars and researchers in the field numerous tables and figures enhance the text

the volume's focus on the long standing connection between tourism and national parks and the changing concept of national parks over time and space give the book a distinct niche in the national parks and tourism literature

diploma thesis from the year 2001 in the subject business economics business management corporate governance grade good klagenfurt university opm organisations personal und managemententwicklung language english abstract 1 introduction in order to sustain our global environment and improve the quality of living in our human settlements we commit ourselves to sustainable patterns of production consumption transportation and settlement development pollution prevention respect for the carrying capacity of eco systems and the preservation of opportunities for future generations 1 istanbul declaration on human settlements june 1996 national parks in the united states and almost all over the world are being subjected to a paradigm shift in park conservation and management in the early years of national parks conservation strategies and management actions were based on a

belief that parks were static landscapes isolated from human activities and adjacent lands and that they were meant solely for the pleasure of visitors attempts to resolve system dysfunctions wrought by erroneous views and the consequences of subsequent management policies such as predator removal and fire suppression were approached one species at a time today this paradigm is slowly shifting to a knowledge based understanding of ecosystems as we now recognize the need to include people as part of the system and to address causes rather than symptoms of system dysfunction by managing whole ecosystems not just single species however national park management is not just limited to conservation strategies national park management includes a widespread variety of management activities such as the most essential activities like park system planning land protection natural resource management biological resource management fire management water resource management air resource management geologic resource management soundscape and lightscape management cultural resource management e g archeological resources cultural landscape ethnographic resources historic structures wilderness preservation and management interpretation and education tourism visitor management and park facilities management it is clear that in each park the emphasis of management activities should be adapted to the needs of the park its problems and challenges however the next generation of park managers will need to be able to tolerate ambiguity manage change manage tourism patterns set and communicate priorities handle controversy and understand political processes
