conversational agents cas are changing the way people interact in their daily lives specifically cas such as chatbots or voice assistants are increasingly covering services traditionally provided by human employees ca based services are available at any time and in any capacity providing convenience and comfort while overcoming the limitations of human employees however many cas are imperfect and prone to errors such as frequently misinterpreting users requests which leads to a mismatch between the expectations of the service and the service provided as a result some ca based services have been discontinued in the past in this context a human like design of cas potentially offers a valuable approach to enhancing the user s perception of a service prior research shows that this leads to individuals interacting with a human like ca as if they would interact with a real individual furthermore human like errors could be considered a social cue since it is human nature to make errors to address the overall research area of cas imperfections four studies were conducted and synthesized in this dissertation the studies provide novel insights into the design of human like text based cas interrelated with the occurrence of ca imperfections including human like errors through a set of experiments four major contributions are provided first

the human like design of imperfect cas can mitigate the negative individuals perceptions if implemented carefully second the human like design of imperfect cas can shift individuals into a positive emotional state which increases service satisfaction third human like errors are not perceived as human like and should not be employed in ca based service encounters at present fourth not every ca based service requires a high level of human like design as the expectations of a ca based service may be as different as the expectations of traditional human based services
