equity strategies are closely guarded secrets and as such there is very little written about how investors and corporate can utilise equity vehicles as part of their growth strategies in this much needed book industry expert juan ramirez guides readers through the whole range of equity derivative instruments showing how they can be applied to a range of equity capital market situations including hedging yield enhancement and disposal of strategic stakes mergers and acquisitions stock options plan hedging equity financings share buybacks and other transactions on treasury shares bank regulatory capital arbitrage and tax driven situations the book includes case studies to highlight how equity derivative strategies have been used in real life situations

we provide evidence that bears on the impact of deregulation that removes impediments to integration of investment banking and commercial banking functions at issue is whether close relationships between commercial banks and investment banks give rise to conflicts of interest and enhanced bargaining power or whether relationships enhance information production and dissemination in particular we are interested in whether close relationships increase capital market access for smaller lesser known firms we approach these questions with a research design that purposefully generates a high likelihood of finding evidence of conflicts in contrast to previous studies that examine debt or seasoned equity securities we examine ipos which arguably are more information intensive and

subject to more severe conflict of interest problems we use a sample of 484 japanese ipos over a time period characterized by extreme financial market distress when firms in japan go public they can engage an investment banker who is related through a common main bank or can select an alternative investment banker the main bank relationship can be an efficient way for the investment bank to acquire information generated but may give rise to conflicts we use data from two different investment banking regimes in japan a hybrid auction method regime and a book building regime to test the effects of main bank relationships on access to japan s equity capital market issue costs and aftermarket performance we find that main banking relationships give small issuers increased access to equity capital markets but that issuers of large ipos switch to non related investment banks that are capable of managing large offerings while we find evidence that investment banks seek to exploit bargaining power with related issuers we also find that issuers respond to expected high issue cost by switching to non related investment banks the net result is that total issue costs through related and non related investment banks are similar with respect to aftermarket performance and use of offer proceeds we find no evidence of conflict of interest or self dealing for either the main bank or the investment bank

this book investigates two issues that have been slowing down the development of equity capital markets in transition economies slow progress with privatisation and the lack of shareholder rights both problems are illustrated with data for the largest publicly traded russian firms furthermore two theoretical models are developed to offer insights into the nature of both problems the principal conclusion is that partial privatisation as well as the lack of shareholder rights are likely to be only a temporary phenomenon and both problems are likely to be mitigated as the transition process advances the book should enhance the understanding of academics as well as policy makers and practitioners of potential pitfalls in fostering the development of equity markets in transition economies as well as developing countries
