satisfiability sat related topics have attracted researchers from various disciplines logic applied areas such as planning scheduling operations research and combinatorial optimization but also theoretical issues on the theme of complexity and much more they all are connected through sat my personal interest in sat stems from actual solving the increase in power of modern sat solvers over the past 15 years has been phenomenal it has become the key enabling technology in automated

verification of both computer hardware and software bounded model checking bmc of computer hardware is now probably the most widely used model checking technique the counterexamples that it finds are just satisfying instances of a boolean formula obtained by unwinding to some fixed depth a sequential circuit and its specification in linear temporal logic extending model checking to software verification is a much more difficult problem on the frontier of current research one promising approach for languages like c with finite word length integers is to use the same idea as in bmc but with a decision procedure for the theory of bit vectors instead of sat all decision procedures for bit vectors that i am familiar with ultimately make use of a fast sat solver to handle complex formulas decision procedures for more complicated theories like linear real and integer arithmetic are also used in program verification most of them use powerful sat solvers in an essential way clearly efficient sat solving is a key technology for 21st century computer science i expect this collection of papers on all theoretical and practical aspects of sat solving will be extremely useful to both students and researchers and will lead to many further advances in the field edmund clarke fore systems university professor of computer science and professor of electrical and computer engineering at carnegie mellon university winner of the 2007 a m turing award

a collection of papers on various theoretical and practical aspects of sat solving it is suitable for students and researchers

propositional logic has been recognized throughout the centuries as one of the cornerstones of reasoning in philosophy and mathematics over time its formalization into boolean algebra was accompanied by the recognition that a wide range of combinatorial problems can be expressed as propositional satisfiability sat problems because of this dual role sat developed into a mature multi faceted scientific discipline and from the earliest days of computing a search was underway to discover how to solve sat problems in an automated fashion this book the handbook of satisfiability is the second updated and revised edition of the book first published in 2009 under the same name the handbook aims to capture the full breadth and depth of sat and to bring together significant progress and advances in automated solving topics covered span practical and theoretical research on sat and its applications and include search algorithms heuristics analysis of algorithms hard instances randomized formulae problem encodings industrial applications solvers simplifiers tools case studies and empirical results sat is interpreted in a broad sense so as well as propositional satisfiability there are chapters covering the domain of quantified boolean formulae qbf constraints programming techniques csp for word level problems and their propositional encoding and satisfiability modulo theories smt an extensive bibliography completes each chapter this second edition of the handbook will be of interest to researchers graduate students final year undergraduates and practitioners using or contributing to sat and will provide both an inspiration and a rich resource for their work edmund clarke 2007 acm turing award recipient sat solving is a key technology for 21st century computer science donald knuth 1974 acm turing award recipient sat is evidently a killer app because it is key to the solution of so many other problems stephen cook 1982 acm turing award recipient the sat problem is at the core of arguably the most fundamental question in computer science what makes a problem hard
