research paper undergraduate from the year 2012 in the subject mathematics applied mathematics grade 5 5 zhaw zürcher hochschule für angewandte wissenschaften language english abstract as a consequence of the recent financial crisis institutions are increasingly interested in identifying turning points in financial time series the accurate and early identification of these turning points can result in the optimal exploitation of the invested capital and profit maximization most existing methods for the real time identification of turning points have proved unreliable and therefore the need to develop a cutting edge model the dfa methodology of prof dr marc wildi is one promising real time procedure that seeks to solve this problem the purpose of this thesis is the evaluation and comparison of different variants of the dfa procedure in order to find a method for the effective identification of turning points in important financial time series such as the s p 500 and the eurostoxx 50 and their implied volatility indices vix and vstoxx resp further this thesis aims to develop a suitable investment strategy based on the obtained results for the purpose of this thesis the time series mentioned above were analyzed between the years 1990 and 2011 using the last year as out of sample data frequential

analysis using fourier transforms as well as different variants of the dfa algorithm were applied in order to identify the desired turning points the results obtained from these analyses of the s p 500 and eurostoxx 50 time series show a considerable out of sample investment return which verifies the validity of the model on a second level of analysis using the implied volatility indices it was possible to generalize the model and thereby verify the initial results moreover with the help of the development of further investment strategies it was possible to normalize profit returns maintaining a semi constant growth which is usually preferred by financial institutions finally given the structural similarities of the two main financial series examined whose clear profile was only observable using the dfa system it was possible to combine both time series using the daily exchange rate as a cyclical and structural catalyst thus achieving a deeper thrust of the model this all was possible by highlighting the flexibility of the dfa model for real time analysis of financial time series and its practical application as a tool for investment analysis therefore the dfa model enables an accurate real time identification of tuning points in financial series

provides in depth guidance on making the transition into adulthood and laying a foundation for success page 4 of cover

libby libby short wrote this text based on their belief that the subject of financial accounting is inherently interesting but financial accounting textbooks are often not they believe most financial accounting textbooks fail to demonstrate that accounting is an exciting field of study and one that is important to future careers in business when writing this text they considered career relevance as their guide when selecting material and the need to engage the student as their guide to style pedagogy and design libby libby short is the only financial accounting text to successfully implement a real world single focus company approach in every chapter students and instructors have responded very favorably to the use of focus companies and the real world financial statements the companies chosen are engaging and the decision making focus shows the relevance of financial accounting regardless of whether or not the student has chosen to major in accounting

the thesis develops the concept of new finance capital nfc and defines it as system of related industrial commercial and banking capital affiliates or parts operate in the interest of the whole and as a result obtain systemic gains or synergies unavailable to individual capitals the achievement of monopoly power in individual industries and the strengthening of overall financial capacity of affiliates are both key elements in the new finance capital s strategy the research then proceeds to operationalise the nfc into that of financial groups and identifies 27 such groupings in the peruvian economy these business groupings are mostly controlled by single families and have as members 40 of the largest private domestic firms and all private financial institutions they account for around 13 of gdp although they invest in all sectors they have a significant share of their capital in the manufacturing industry in addressing the issue of the systemic gains of these groupings the thesis identifies the increase in the capacity of finance a reduction in the capital

required to control companies and a saving in the amount of taxes paid as the three most important financial synergies they obtain member banks and insurance companies are crucial to the achievement of these synergies they allocate a significant proportion of loans to member firms and they are prepared to take considerable risks for affiliates the study shows that financial groups locate some member firms in concentrated and vertically integrated industries which allow for the appropriation of monopoly profits monopoly profits provide the additional financing required by members to invest and diversify into other sectors one important effect of systemic management of finance and the obtention of monopoly profits is that the financial structure of members has a larger proportion of debt relative to equity than non group firms the thesis concludes with the observation that peruvian financial groups have not performed the developmental role of similar organisational forms in countries like japan or korea although having the financial knowledge and power to diversify into high technology industries peruvian groups remain in the less dynamic and traditional sectors some of the reasons for such impact are then discussed

scientific essay from the year 2012 in the subject business economics investment and finance grade b king s college london language english abstract for quite a long time now the main concern for investors as well as regulators of financial markets has been the risk of catastrophic market and the sufficiency of capital needed to counter such kind of risk when it occurs many institutions have undergone losses despite their gigantic nature and good forecasting and this has been associated with inappropriate forms of pricing and poor management together with the fraudulent cases factors that have always brought the issue of managing risk and regulating these financial markets to the level of public policy as well as discussion a basic tool that has been identified as being effective in the assessment of financial risk is the value at risk var process artzner et al 1997 the var has been figured out as being an amount that is lost on a given form of portfolio including a small probability in a certain fixed period of time counted in terms of days var however poses a major challenge during its implementation and this has more to do with the specification of the kind of probability distribution having extreme returns that is made use of during the calculation of the estimates used in the var analysis mahoney 1996 mcneil frey 2000 dowd 2001 as has been noted the nature of var estimation majorly does depend on the accurate predictions of some uncommon events or risks that are catastrophic this is attributed to the fact that var is a calculation made from the lowest portfolio returns for this reason any form of calculation that is employed in the estimation of var must be able to encompass the tail events prediction and make this its primary goal Chiang et al 2007 Engle 2002 Engle Kroner 1995 Engle Rothschild 1990 Francis et al 2001 there have been statistical techniques as well as thumb rules that many researchers argue as having been very instrumental in the prediction and analysis of intra day and in most cases day to day risk these are however not appropriate for the analysis of var the predictions of var now fall under parametric predictions that encompass conditional volatilities and non parametric prediction that incorporate the unconditional volatilities Jorion 2006 Jorion 2007
