heat conduction fifth edition upholds its reputation as the leading text in the field for graduate students and as a resource for practicing engineers the text begins with fundamental concepts introducing the governing equation of heat conduction and progresses through solutions for one dimensional conduction orthogonal functions fourier series and transforms and multi dimensional problems integral equations laplace transforms finite difference numerical methods and variational formulations are then covered a systematic derivation of the analytical solution of heat conduction problems in heterogeneous media introducing a more general approach based on the integral transform method has been added in this new edition along with new and revised problems and complete problem solutions for instructors

despite the length of time it has been around its importance and vast amounts of research combustion is still far from being completely understood industrial applications of combustion add environmental cost and fuel consumption issues to its fundamental complexity and the process and power generation industries in particular present their o

this extensively revised 4th edition provides an up to date comprehensive single source of information on the important subjects in engineering radiative heat transfer it presents the subject in a progressive manner that is excellent for classroom use or self study and also provides an annotated reference to literature and research in the field the foundations and methods for treating radiative heat transfer are developed in detail and the methods are demonstrated and clarified by solving example problems the examples are especially helpful for self study the treatment of spectral band properties of gases has been made current and the methods are described in detail and illustrated with examples the combination of radiation with conduction and or convection has been given more emphasis nad has been merged with results for radiation alone that serve as a limiting case this increases practicality for energy transfer in translucent solids and fluids a comprehensive catalog of configuration factors on the cd that is included with each book provides over 290 factors in algebraic or graphical form homework problems with answers are given in each chapter and a detailed and carefully worked solution manual is available for instructors

the current thoroughly revised and updated edition of this approved title evaluates information sources in the field of technology it provides the reader not only with information of primary and secondary sources but also analyses the details of information from all the important technical fields including environmental technology biotechnology aviation and defence nanotechnology industrial design material science security and health care in the workplace as well as aspects of the fields of chemistry electro technology and mechanical engineering the sources of information presented also contain publications

available in printed and electronic form such as books journals electronic magazines technical reports dissertations scientific reports articles from conferences meetings and symposiums patents and patent information technical standards products electronic full text services abstract and indexing services bibliographies reviews internet sources reference works and publications of professional associations information sources in engineering is aimed at librarians and information scientists in technical fields as well as non professional information specialists who have to provide information about technical issues furthermore this title is of great value to students and people with technical professions
