this volume contains the proceedings of the virtual ams special session on equivariant cohomology held march 19 20 2022 equivariant topology is the algebraic topology of spaces with symmetries at the meeting equivariant cohomology was broadly interpreted to include related topics in equivariant topology and geometry such as bredon cohomology equivariant cobordism gkm goresky kottwitz and macpherson theory equivariant k theory symplectic geometry and equivariant schubert calculus this volume offers a view of the exciting progress made in these fields in the last twenty years several of the articles are surveys suitable for a general audience of topologists and geometers to be broadly accessible all the authors were instructed to make their presentations somewhat expository this collection should be of interest and useful to graduate students and researchers alike

modern mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems thus it is par excellence a model of rational inquiry links between cognitive psychology and mathematics education have been particularly strong during the last decades indeed the enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference yet these deviations should not be called errors as cognitive psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats humans as the cognitive psychologist and economist herbert simon claimed do not usually optimize but rather satisfice even when solving problem this research topic aims at demonstrating that these insights

have had a decisive impact on mathematics education we want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program in simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity
