this book makes the extremely complex process of architectural perception far more transparent and thus contributes to a better understanding of our built environment why is there so much debate about the appearance of our built environment about the aesthetics of architecture today why do opinions about the aesthetic quality of buildings often diverge extremely even among experts why can't we agree on architecture on what is beautiful and what is not most areas of construction such as statics and building physics are measurable and can therefore be substantiated with objective arguments yet this does not apply to the unquantifiable aesthetics of architecture accordingly judgments on aesthetics are always subject specific and strongly dependent on the viewer nevertheless the aesthetics of architecture is not just a matter of taste many relationships between buildings as objects and viewers as subjects can be determined objectively with the help of perceptual psychology and information theory as this book demonstrates

because of the ease with which we perceive many people see perception as something that just happens however even seemingly simple perceptual experiences involve complex underlying mechanisms which are often hidden from our conscious experience these mechanisms are being investigated by researchers and theorists in fields such as psychology cognitive science neuroscience computer science and philosophy a few examples of the questions posed by these investigations are what do infants perceive how does perception develop what do perceptual disorders reveal about normal functioning how can information from one sense such as hearing be affected by information from another sense such as vision how is the information from all of our senses combined to result in our perception of a coherent environment what are some practical outcomes of basic research in perception these are just a few of the questions this encyclopedia will consider as it presents a comprehensive overview of the field of perception for students researchers and professionals in psychology the cognitive sciences neuroscience and related medical disciplines such as neurology and ophthalmology

in this comprehensive treatment of infant perception philip kellman and martha arterberry bring together work at multiple levels to produce a new picture of perception's origins

the field of perception is devoted to explaining the operation of the senses and the experiences and behaviors resulting from stimulation of the senses perceptual processes such as recognizing faces seeing color hearing music and feeling pain represent the actions of complex mechanisms yet we usually do them easily the encyclopedia of perception presents a comprehensive overview of the field of perception through authoritative essays written by leading researchers and theoreticians in

psychology the cognitive sciences neuroscience and medical disciplines it presents two parallel and interacting approaches the psychophysical or determining the relationship between stimuli in the environment and perception and the physiological or locating the biological systems responsible for perception are there any processes not associated with perception surely there are but the pervasiveness of perception is truly impressive and the phenomena of perception and its mechanisms are what this encyclopedia is about key features contains 16 pages of color illustration and photography to accompany the entries offers a varied and broad list of topics including basic research as well as methodologies theoretical approaches and real world applications of perceptual research emphasizes human perception but includes ample research because of its importance in its own right and because of what this research tells us about human perception written by recognized experts from many disciplines but for an audience with no previous background in perception students and members of the general public alike key themes action attention audition chemical senses cognition and perception computers and perception consciousness disorders of perception illusory perceptions individual differences human and comparative across species not including ageing disorders and perceptual development methods perceptual development experience philosophical approaches physiological processes sense interaction skin and body senses theoretical approaches visual perception
