greenland is becoming a critically important territory in terms of tourism climate change and competition for resource access yet it has been poorly represented in academic literature

tourism now features as a major source of income for the territory alongside fisheries cruise tourism is increasing rapidly and might superficially appear to be best suited to greenlandic conditions given the lack of large scale accommodation infrastructure and almost non-existent land routes between settlements ironically one of the most spectacular tourist attractions is the large number of icebergs that are being calved as the result of glacier retreat and ice cap melting both appearing to be taking place at ever increasing rates as a consequence of ice removal the territory's claimed extensive range of mineral resources not least rare earth elements and hydrocarbons are becoming more accessible for exploitation and thereby are acting increasingly as the focus for geopolitical competition this book explores the nature of dynamics between tourism climate change and the geopolitics of natural resource exploitation in the arctic and examines their interrelationships specifically in the critical context of greenland but within a framework that emphasises the wider global implications of the outcomes of such interrelationships

completely updated and revised cruise ship tourism 2nd edition covers the economic social and environmental impacts of cruising combining the latest knowledge and research to provide a comprehensive account of the subject despite the industry growing rapidly there is a substantial gap in the related literature and this book addresses the key issues for researchers students and industry professionals a valuable one stop shop for those interested in cruise ships and maritime tourism this new edition from major names in the field is also an invaluable resource for anyone concerned more widely with tourism and business development
