transportation and others the study of such systems is outside the framework of the methods of classical queuing theory thus new methodologies such as systems with moving servers have evolved these systems are different and have complicated structures but they have one common ideology i e systems with moving servers the book is dedicated to constructing and investigating mathematical models of queueing systems with moving servers it is meant for researchers who are working in the application of mathematical methods in various fields traffic communication systems and others mathematicians in the field of queueing systems also researchers who are interested in the construction and investigation of mathematical models of queueing systems with moving servers the theoretical results are demonstrated on numerical examples

the american journal of mathematics publishes research papers and articles of broad appeal covering the major areas of contemporary mathematics

this volume contains a selection of papers presented at the fifth franco belgian meeting of statisticians held in luminy marseille france on november 23 24 1984 the diversity of these papers reflects the broadness of the topic of the meeting the asymptotic theory for non i i d processes first of all asymptotic theory is focused on various types of convergence almost sure convergence convergence in distribution and convergence in variation in an other direction relaxing the hypothesis of i i d processes leads to consider a large variety of situations characterized either by hypotheses on the marginal model i e after integration with respect to parameters or exogenous variables such as stationarity exchangeability of markovian property or by assumptions on the model conditionally on exogenoous variables the main tools used in such situations are martingale theory and the ergodic theorem they may be applied in various situations such as posterior expectations in bayesian analysis rational expectations generalized residuals and mixing conditions in conditional models or predictions in nonstationary q dependent processes all the above concepts are met both theoretically and through applications in the present volume
