how can we design networked e learning courses to ensure students participate in them and engage in quality learning outcomes what happens in an e learning course that is designed to foster group work and a sense of community how can we research e learning practice in ways

that will enhance the processes of learning and teaching this book outlines approaches to networked e learning course design that are underpinned by a belief that students learn best in these contexts when they are organised in groups and communities as such the book is one of the first to provide a detailed analysis of what goes on in e learning groups and communities but how do students react to working in e learning groups and communities what determines their willingness to adopt new forms of learning in order to participate in these new courses what actually happens in an e learning community and what impact does this have on students and tutors this book examines these key questions through a variety of research approaches aimed at exploring the experience of e learners as they participate in successful e groups and communities it also offers ways in which learning outcomes may be achieved in these communities and outlines the specific skills that students would develop through e learning e learning groups and communities is essential reading for teachers trainers managers researchers and students involved in e learning courses as well as people interested in improving the quality of the learning experience

from the foreword is it possible at present to identify a core cluster of theoretical ideas concepts and methods with which everyone working in the area of learning and cognition needs to be familiar would it be possible to make explicit the relationships that we feel do or must exist among the various subspecialties ranging from conditioning through perceptual learning and memory to psycholinguistics and to present these in a sufficiently organized way to help specialists and non specialists alike in relating particular lines of research to the broader spectrum of activity these questions were posed to a substantial number of investigators who are currently most active in developing the ideas and doing the research their response constitutes this handbook first published in 1975 volume 1 of this handbook attempts to present an overview of the field and to introduce the principal theoretical and methodological issues that will persistently recur in the expanded treatments of specific research areas that comprise the later volumes deferring to the current zeitgeist rather than to chronology they begin with the present state of cognitive psychology then introduce the comparative approach and conclude this volume with a rapid three chapter review of the evolution of ideas from conditioning to information processing

the mathematical theory of computation has given rise to two important approaches to the informal notion of complexity kolmogorov complexity usually a complexity measure for a single object such as a string a sequence etc measures the amount of information necessary to describe the object computational complexity usually a complexity measure for a set of objects measures the computational resources necessary to recognize or produce elements of the set the relation between these two complexity measures has been considered for more than two decades and many interesting and deep observations have been obtained in march 1990 the symposium on theory and application of minimal length encoding was held at stanford university as a part of the aaai 1990 spring symposium series some sessions of the

symposium were dedicated to kolmogorov complexity and its relations to the computational complexity theory and excellent expository talks were given there feeling that due to the importance of the material some way should be found to share these talks with researchers in the computer science community i asked the speakers of those sessions to write survey papers based on their talks in the symposium in response five speakers from the sessions contributed the papers which appear in this book

soon after charles darwin formulated his theory of evolution primate cognition became a major area of research in this book michael tomasello and josep call assess the current state of our knowledge about the cognitive skills of non human primates they integrate empirical findings on the topic from the beginning of the century to the present placing this research in theoretical perspective they begin with an examination of the way primates adapt to their physical world mostly for the purpose of foraging the second part of the book looks at primate social knowledge and focuses on the adaptations of primates to their social world for purposes of competition and cooperation in the third section the authors construct a general theory of primate cognition distinguishing the cognition in primates from that of other mammals human in particular their broad ranging theory provides a guide for future research primate cognition is an enlightening exploration of the cognitive capacities of our nearest primate relatives and a useful resource for a wide range of researchers and students in psychology behavioral biology
