descripción resumen español castellano el objetivo principal de esta tesis doctoral consiste en mostrar la influencia que el desarrollo de la biología tuvo sobre la filosofía en los albores de la modernidad y muy especialmente en g w leibniz sostengo que no se puede alcanzar una comprensión correcta de su pensamiento filosófico sin tomar en consideración el influjo

que recibió de las ciencias de la vida trato además de ensayar esta clave interpretativa con algunos de los conceptos centrales del pensamiento leibniziano la tesis trata sobre biología y metafísica en los albores de la modernidad creo que la biología marcó profundamente en los inicios de la modernidad el desarrollo de la metafísica así fue en muchos autores por ejemplo en los van helmont o diderot pero el caso más evidente e influyente fue el de leibniz de quien trataremos con más detalle a lo largo del trabajo si bien leibniz ha de ser interpretado en el contexto de una época la suya en la que se dio esta influencia de la biología sobre la metafísica de modo generalizado no podemos dejar de contemplar y ocuparnos de la posición dominante en los siglos xvii xviii el mecanicismo cartesiano hemos querido hacer en este trabajo de investigación una resignificación y reinterpretación de leibniz desde un enfoque vitalista recogiendo a ese otro leibniz biólogo y médico en constante debate con numerosos filósofos del momento seguidores de posturas más mecanicistas el tema de la presente disertación doctoral se basa en el trabajo desarrollado en la tesina doctoral acerca también de esta temática y que titulé g w leibniz de la biología a la metafísica descripción resumen inglés the main objective of this doctoral thesis is to show the influence that the development of biology had on philosophy at the dawn of modernity and especially on g w leibniz i contend that a correct understanding of his philosophical thought cannot be reached without taking into account the influence it received from the life sciences i also try to test this interpretive key with some of the central concepts of leibnizian thought the thesis deals with biology and metaphysics at the dawn of modernity i believe that biology profoundly marked the development of metaphysics at the beginning of modernity this was the case for many authors for example the van helmont or diderot but the most obvious and influential case was that of leibniz whom we will deal with in more detail throughout the work although leibniz has to be interpreted in the context of a time his in which this influence of biology on metaphysics occurred in a generalized way we cannot help but contemplate and occupy ourselves with the dominant position in the xvii xviii centuries cartesian mechanism we wanted to do in this research work a resignification and reinterpretation of leibniz from a vitalist approach collecting that other biologist and doctor leibniz in constant debate with numerous philosophers of the moment followers of more mechanistic positions the subject of this doctoral dissertation is based on the work developed in the doctoral dissertation on this subject as well which i entitled g w leibniz from biology to metaphysics
