this book describes the various techniques for nondestructive quality assessment of fruits and vegetables it covers the methods measurements operation principles procedures data analysis and applications for implementing these techniques the book presents the details of nondestructive approaches focusing on the present day trends and existing future opportunities in the fresh food supply chain first it overviews different nondestructive techniques in food quality detection then it presents nondestructive methods monochrome computer vision imaging techniques biospeckle laser technique fourier transform infrared ftir spectroscopy hyperspectral imaging raman spectroscopy near infrared nir spectroscopy x ray computed tomography ultrasound acoustic emission chemometrics electronic nose and tongue selected applications of each method are also introduced as a result readers gain a better understanding of how to use nondestructive methods and technologies to detect the quality of fresh fruits and vegetables with a wide range of interesting topics the book will

benefit readers including postharvest food scientists technologists industry personnel and researchers involved in fresh produce quality detection the book can also serve as a readily accessible reference material for postgraduate students

biosensors in food safety and quality have become indispensable in today s world due to the requirement of food safety and security for human health and nutrition this book covers various types of sensors and biosensors that can be used for food safety and food quality monitoring but these are not limited to conventional sensors such as temperature sensors optical sensors electrochemical sensors calorimetric sensors and ph sensors the chapters are framed in a way that readers can experience the novel fabrication procedures of some advanced sensors including lab on a chip biosensors iot based sensors microcontroller based sensors and so on particularly for fruits and vegetables fermented products plantation products dairy based products heavy metal analysis in water meat fish etc its simplistic presentation and pedagogical writing provide the necessary thrust and adequate information for beginners scientists and researchers the book offers comprehensive coverage of the most essential topics which include the following fundamentals of biosensors overview of food safety and quality analysis major toxicants of food and water fabrication techniques of biosensors applicable for different segments of the food industry this book serves as a reference for scientific investigators who work on the assurance of food safety and security using biosensing principles as well as researchers developing biosensors for food analysis it may also be used as a textbook for graduate level courses in bioelectronics

still the most up to date comprehensive and authoritative book on food diagnostics available featuring seven entirely new chapters the second edition of this critically acclaimed guide has been extensively revised and updated once again delivering food professionals the latest advances in food diagnostics and analysis the book approaches the topic in several different ways reviewing novel technologies to evaluate fresh products describing and analysing in depth specific modern diagnostics providing analyses of data processing and discussing global marketing with insights into future trends written by an international team of experts this volume not only covers most conventional lab based analytical methods but also focuses on leading edge technologies which are being or are about to be introduced advances in food diagnostics second edition covers ultrasound rmn chromatography electronic noses immunology gmo detection and microbiological and molecular methodologies for rapid detection of pathogens explores the principles and applications of immunodiagnostics in food safety and the use of molecular biology to detect and characterize foodborne pathogens includes dna based and protein based technologies to detect and identify genetically modified food or food components focuses on the translation of diagnostics tests from bench to the market in order to illustrate the benefits to the food industry provides an overview of the business end of food diagnostics identifying the markets delineating the sellers and the buyers comparing current technology with traditional methods certifying operations and procedures and analysing diagnostic devices within the food and related industries this is an indispensable resource for food scientists food quality analysts food microbiologists and food safety professionals it also belongs on the reference shelves of labs conducting food diagnostics for the analysis of the sensory quality and safety aspects of food

many measurements of product and process characteristics have traditionally been off line involving removing the product and taking it to a quality control laboratory for analysis over a period of hours or even days however the development of faster more automated methods of production and the shift to more proactive quality and safety management systems such as haccp has forced the food industry to look for more rapid methods with the potential for continuous real time measurement of products and processes with its distinguished editor and international team of contributors this important collection summarises key developments in this growing field part one reviews the emergence of new methods for analysing food safety it includes chapters on the detection of foreign bodies other contaminants such as toxins pesticides dioxins and veterinary residues and rapid methods for detecting pathogenic and spoilage bacteria part two discusses the measurement of product quality there are chapters on analysing ingredients such as additives and micronutrients genetically modified organisms and added water a number of chapters discuss methods for analysing food composition and the use of electronic noses to monitor food quality a final chapter reviews ways of integrating such measurements into effective process control rapid and on line instrumentation for food quality assurance provides a benchmark of good practice in this important field and will be a valuable reference for the food industry summarises key developments in the growing field of food quality assurance focussing on rapid and on line instrumentation includes chapters on the detection of foreign bodies pathogenic and spoilage bacteria and other contaminants such as toxins pesticides dioxins and veterinary residues discusses the measurement of product quality and analyses ingredients such as additives and micronutrients genetically modified organisms and added water

food consumption is leaning toward products that provide both nutritional value and good flavor in recent years researchers have focused on how to scientifically analyze and evaluate foods nutritional and flavor qualities under different processing methods or parameters by various effect relationship analysis tools to investigate the internal relations between nutrients and flavor substances however during food processing some unstable components may undergo degradation volatilization or secondary reactions due to changes in temperature pressure humidity ph etc resulting in challenging research work with complex data variations in multiple dimensions

this pocket guide provides a comprehensive start to finish overview of the basics of scale development giving practical guidance that practitioners at all levels will be able to put to use
