today global changes and human activities affect plants within each of the world s
ecosystems plant ecology in a changing world provides a foundation for
understanding how the changes underway impact structure and function in the world s
major biomes while also describing how evolution has resulted in the biochemical
physiological structural and life history features that shaped plants and their
capacities to persist across widely contrasting environments this textbook is designed
for undergraduate students and graduate students as well to serve as a resource for
climate change and ecosystem scientists seeking a foundation on the principles of
plant ecology and the basis of plant adaptations while many textbooks focus primarily
on natural ecosystems plant ecology in a changing world also recognizes the
ecological importance of invasive managed and urban ecosystems and of the ways in
which ecosystems are already being impacted by both human activities and a
warming planet key features replete with 450 figures that help to elucidate concepts
and charts to clearly present key data boxes within chapters allow those who wish to
delve into more advanced aspects of topics and of those key methodological
approaches used to quantify processes highlights of key plant ecologists and of their
contributions each chapter concludes with a bulleted summary enabling students to
recap the key points of the chapter each chapter comes with both a list of references
as well as with suggested readings allowing the student to expand their knowledge on

for many animals behavioural adjustments represent the first response to human modified conditions by improving reproduction and survival such adjustments can play the lead in maintaining viable populations in the face of rapid environmental change behavioural responses however can also be maladaptive and reduce individual fitness particularly if favourable reaction norms have not yet evolved because animals are encountering conditions that they have never experienced before clearly behaviour matters but how can we capitalise on our understanding of animal behaviour to improve conservation and management outcomes behavioural responses to a changing world challenges and applications a companion volume to the first edition published in 2012 examines wildlife behavioural responses to human induced environmental change through a translational lens despite considerable and growing interest in research on the topic the predictive value and practical application of what has been learned remains underappreciated and underutilized in the context of developing real world solutions to redress this the current book builds upon the foundations of the original volume but with a more applied perspective that focuses on highlighting how different forms of environmental challenges from climate change to urbanisation influence animal behaviour and how we can effectively harness knowledge of animal behaviour to effect practical solutions to predicting and mitigating the weighty impacts of a radically changed and changing world
