this book evaluates and suggests potentially critical improvements to causal set theory one of the best motivated approaches to the outstanding problems of fundamental physics spacetime structure is of central importance to physics beyond general relativity and the standard model the causal metric hypothesis treats causal relations as the basis of this structure the book develops the consequences of this hypothesis under the assumption of a fundamental scale with smooth spacetime geometry viewed as emergent this approach resembles causal set theory but differs in important ways for example the relative viewpoint emphasizing relations between pairs of events and relationships between pairs of histories is central the book culminates in a dynamical law for quantum spacetime derived via generalized path summation

women in stem breaking down the barriers provides a comprehensive examination of the persistent underrepresentation of women across science technology engineering and mathematics drawing from extensive research spanning preschool education through university and employment sectors this book uniquely integrates perspectives from all three key developmental stages to offer a complete analysis of the barriers women face it critically evaluates existing interventions and approaches revealing which strategies have proven effective and which have fallen short women in stem breaking down the barriers delivers practical actionable recommendations for stakeholders across the stem ecosystem and will be of use to professional bodies universities and government policy makers as well as students in gender studies sociology and education
