whether we like to admit it or not most of us care about our own appearance we spend  
some of each day in front of mirrors invest our hard earned money on grooming  
ourselves for both business and pleasure and are increasingly prone to taking selfies the  
basis of such behaviours is self recognition the process of identifying our own physical

appearance over the last 200 years this seemingly mundane ability has become increasingly subject to investigation by social scientists who are attempting to tease out some of its associated complexities how do we recognize ourselves does it involve self awareness when does it develop which species do and do not show self recognition how does the brain perform self recognition what is the evolutionary value if any of self recognition very few clear cut answers exist for these questions perhaps most problematic is the absence of consensus about how the brain underlies self recognition this book provides a broad multidisciplinary theoretical framework and an extensive overview concerning these issues which in conjunction with the advocacy and execution of novel experimental paradigms ultimately offers researchers an example of how to further clarify our understanding not only for the neural basis of self recognition but also its development mechanisms and function

low temperature radio frequency plasmas are essential in various sectors of advanced technology from micro engineering to spacecraft propulsion systems and efficient sources of light the subject lies at the complex interfaces between physics chemistry and engineering focusing mostly on physics this book will interest graduate students and researchers in applied physics and electrical engineering the book incorporates a cutting edge perspective on rf plasmas it also covers basic plasma physics including transport in bounded plasmas and electrical diagnostics its pedagogic style engages readers helping them to develop physical arguments and mathematical analyses worked examples apply the theories covered to realistic scenarios and over 100 in text questions let readers put their newly acquired knowledge to use and gain confidence in applying physics to real laboratory situations

includes constitution rules and breeders of the association
