the most complete book ever written on how to manufacture psychedelic drugs
intended only for those who have a thorough knowledge of advanced lab techniques
in organic chemistry extracting thc from marijuana making lsd synthesizing cocaine
mescaline harmaline muscimole and more out of print for years now available in a
revised updated edition with more material

this fascinating book presents a scientifically objective and thoroughly documented
exposition of the pharmacological and psychological effects of nearly every known
substance that affects human consciousness from alcohol to zopiclone it also features
first hand accounts and descriptions of the social cultural and religious milieus in which
many psychotropic plants are used and discusses historical allusions to many literary
and scientific figures who used or wrote of mind altering drugs including freud dickens
yeats and huxley intended for a wide audience of general readers seeking unbiased
information the book gives an accessible explanation of drug receptor interaction and
organic chemical structures as well as descriptions of the discovery isolation and
syntheses of the chemical substances responsible for drug activity written by an
experienced chemist the book nevertheless keeps technical information to a minimum

2c b and the shulgin legacy offers an in depth exploration of one of the most intriguing
compounds in psychedelic science and the man behind its discovery alexander shulgin

potential of 2c b and the wider phenethylamine family of psychedelics from the early
synthesis of 2c b in shulgin s lab to its rise in rave culture and its reemergence in
modern therapeutic settings this book provides a comprehensive narrative woven with
rigorous science and cultural context ethan thompson delves into structure activity
relationships receptor pharmacology user experiences and harm reduction strategies

making this work a vital resource for researchers students and curious psychonauts alike through detailed chapters on shulgin s life the pharmacological intricacies of phenethylamines and the therapeutic promise of compounds like 2c b 2c e and 2c t 7 readers are guided through the complex interplay between chemistry and consciousness with its balanced approach and scientific depth this book honors shulgin s legacy and illuminates the path forward in psychedelic research

a volume surveying the wide and interdisciplinary nature of current studies on the mechanism of action of psychotropic drugs presented in a way which emphasizes the value of exploiting the interrelationship between molecular and behavioral neuroscience one of the objectives of this volume of the encyclopedia is to seek to relate the recent advances in our understanding of the molecular basis of neuropharmacology to the current explanations for the behavioral and rewarding properties of recreational drugs

traces the history of the use of hallucinogenic drugs and discusses the psychological and physical effects of lsd marijuana mescaline and other drugs

in this far reaching and novel work experts from across the nation and around the world present evolutionary neuroscientific and psychological approaches to explaining and exploring religion including the newest findings and evidence that have spurred the fledgling field of neurotheology spiritual practices or awakenings have an impact on brain mind and personality these changes are being scientifically predicted and proven for example studies show buddhist priests and franciscan nuns at the peak of religious feelings show a functional change in the lobes of their brain similar processes have been found in people with epilepsy which hippocrates called the sacred disease new research is showing that not only does a person s brain activity change in particular areas while that person is experiencing religion epiphany but that such events can be created for some people even self professed atheists by stimulating various parts of the brain it is not the goal of neurotheology to prove or disprove the existence of god but to understand the biology of spiritual experiences such experiences seem to exist outside of time and space caused by the brain losing its perception of a boundary between physical body and outside world understanding why this is the case could help explain other intangible events such as altered states of consciousness possession supposed alien visitations near death experiences and out of body events understanding how and why these abilities evolved in the brain could also help us understand how religion contributes to the survival of the human race
