whether you re an avid student or an inquisitive learner the chemistry connection from atoms to applications is your key to unlocking the amazing world of chemistry this book breaks down the basic components of matter atoms molecules and chemical reactions into clear explanations simplifying complicated ideas this book makes the connections demonstrating how chemistry affects everything around us from the smallest particles to the most significant applications in daily life you will teach about the amazing mechanisms that underpin everything in our world including the food we consume the technologies we use and even the surrounding natural beauty through lucid illustrations meaningful comparisons and useful advice the chemistry connection makes science approachable and interesting for all readers this book provides a thorough exploration of the fundamentals of chemistry and its practical applications making it ideal for anybody wishing to brush up on their knowledge develop a better understanding of the topic or just quench their curiosity explore and learn how atom relates to your surroundings

the production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products as the great majority of such products are coloured predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material the development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres physico chemical aspects of textile coloration provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye the book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and

properties of water in relation to dyeing dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO_2 fluid as alternatives to water as application medium the up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work the book is essential reading for students teachers researchers and professionals involved in textile coloration

this book explores the evolving nature of objectivity in the history of science and its implications for science education it is generally considered that objectivity certainty truth universality the scientific method and the accumulation of experimental data characterize both science and science education such universal values associated with science may be challenged while studying controversies in their original historical context the scientific enterprise is not characterized by objectivity or the scientific method but rather controversies alternative interpretations of data ambiguity and uncertainty although objectivity is not synonymous with truth or certainty it has eclipsed other epistemic virtues and to be objective is often used as a synonym for scientific recent scholarship in history and philosophy of science has shown that it is not the experimental data baconian orgy of quantification but rather the diversity plurality in a scientific discipline that contributes toward understanding objectivity history of science shows that objectivity and subjectivity can be considered as the two poles of a continuum and this dualism leads to a conflict in understanding the evolving nature of objectivity the history of objectivity is nothing less than the history of science itself and the evolving and varying forms of objectivity does not mean that one replaced the other in a sequence but rather each form supplements the others

this book is remarkable for its insistence that the philosophy of science and in particular that discipline's analysis of objectivity as the supposed hallmark of the scientific method is of direct value to teachers of science meticulously yet in a most readable way Mansoor Niaz looks at the way objectivity has been dealt with over the years in influential educational journals and in textbooks it's fascinating how certain perspectives fade while basic questions show no sign of going away there are few books that take both philosophy and education seriously this one does Roald Hoffmann Cornell University chemist writer and Nobel laureate in chemistry
