blades Disconnect the battery and ensure the motor is not running Place the helicopter on a flat level surface

3 Swashplate Alignment Leveling the Swashplate With the helicopter level use a leveler to ensure the swashplate is perfectly horizontal If the swashplate is not level adjust the swashplate link rods until it is

Checking for Equal Travel Ensure the swashplate moves evenly in all directions Use a measuring tool to check the distance traveled by the swashplate when each control stick is moved Adjust the swashplate link rods accordingly to ensure equal travel

4 Cyclic Control Alignment Neutralizing the Swashplate With the swashplate level ensure the cyclic control sticks are in their neutral position This means the swashplate should be perfectly flat and horizontal with the sticks in their neutral position If its not adjust the servo arms to achieve a neutral position

Checking Cyclic Response Move each cyclic control stick pitch roll and yaw individually and observe the swashplate movement The swashplate should move only in the direction of the corresponding stick If it moves in other directions adjust the links and servos accordingly

5 Pitch Alignment Zero Pitch Adjustment With the blades removed ensure the swashplate is level Using a pitch gauge measure the pitch angle at the main rotor head

3 Adjust the pitch links until the pitch is zero degrees

Positive Pitch Adjustment Move the pitch stick up to its maximum position Measure the pitch angle using the pitch gauge and adjust the pitch links until you reach the desired positive pitch angle typically around 910 degrees

Negative Pitch Adjustment Move the pitch stick down to its maximum position Measure the pitch angle and adjust the pitch links until you achieve the desired negative pitch angle typically around 01 degrees

6 Tail Control Alignment Tail Rotor Blade Pitch With the tail rotor blades installed ensure the tail boom is level Measure the pitch angle of the tail rotor blades using a pitch gauge Adjust the tail rotor pitch links until the pitch is within the manufacturers recommended range typically 02 degrees

Tail Rotor Blade Tracking With the tail rotor spinning check if the blades are tracking correctly The blades should rotate in the same plane without any wobbling If the blades are not tracking correctly adjust the tail rotor blade grip or the tail rotor belt tension

7 Flybarless System Alignment If Applicable Consult the manual for your flybarless system for specific

alignment instructions This typically involves adjusting the gain settings for the flybarless unit to ensure proper response and stability

8 Final Inspection and Test Flight

Once you have completed all the alignment steps carefully inspect the helicopter for any loose components or potential problems Perform a test hover in a safe and open area Observe the helicopters flight behavior and make any necessary adjustments to the alignment settings
