in the late 1990s several of the sponsor agencies of the federal facilities council began developing and implementing initiatives and policies related to sustainable development guidance related to life cycle costing and value engineering was recognized as being supportive of sustainable development in particular when used in the conceptual planning and design phases of acquisition where decisions are made that substantially effect the ultimate performance of a building over its life cycle however specific concerns were raised that when federal agencies apply value engineering in the final stages of design or during construction in response to cost overruns design features that support sustainable development may be eliminated the primary objective of this study therefore was to develop a framework to show how federal agencies can use value engineering and life cycle costing to support sustainable development for federal facilities and meet the objectives of executive order 13123

this review looks at the nation s legal institutional and economic capacity to promote forest conservation and sustainable resource management it focuses on 20 indicators of criterion seven of the so called montreal process and involves an extensive search and synthesis of information from a variety of sources it identifies ways to fill information gaps and improve the usefulness of several indicators it concludes that there is substantial information about the application of such capacities although that application is widely dispersed among agencies and private interests which in turn has led to differing interpretations of the indicators individual chapters identify a need to further develop the conceptual foundation on which many of the indicators are predicated while many uncertainties in the type and accuracy of information are brought to light the review clearly indicates that legal institutional and economic capacities to promote sustainability are large and widely available in both the public and private sectors p vi

because of the redistributive nature of institutions and the availability of implementable alternatives with different distributive consequences the desire of federation members to change institutional specifics in their favor is a permanent feature of the federal political process this is so for two reasons first states or their equivalents in democratic federations usually can succeed in renegotiating the rules if they feel sufficiently motivated to do so second in the case of a federation it is more or less clear who stands to benefit from any change in institutions thus the existence of an equilibrium of constitutional legitimacy at the popular and elite levels cannot be taken for granted the authors show that the presence in the political process of agents who are naturally committed to the status quo institutional arrangement can suffice to coordinate voters to act as if they support existing constitutional arrangements

environmental sustainability practice and research have advanced over the past decade

from novelty to near mainstream status today during this environmentally critical time period sustainability practitioner techniques such as environmental energy and social auditing other sustainability information and related systems and a wide variety of environmental sustainability approaches have been developed improved and institutionalised advancing both the practice and research of environmental sustainability management and policy however academics and practitioners in the sustainability field still have widely differing perspectives on what a sustainable organisation is or might be but seldom take the opportunity to share these respective sustainability visions let alone the multiple ways to achieve them new horizons in research on sustainable organisations is intended to bridge this gap between academics and practitioners with cutting edge research from both groups on progress towards sustainability after working on sustainability related projects involving other academics both research and practitioner oriented graduate students consultants managers and activists the lead co editors of this volume saw the need to encourage information exchanges among differing networks of sustainability stakeholders to create a pathway for researchers and practitioners in the general area of organisations and the natural environment to address issues of common interest there are many networks in the general subject area but the cross pollination of ideas between academics and practitioners remains sketchy new horizons in research on sustainable organisations is intended to present and encourage such cross pollination the chapters in this volume are presented in three subsets generally proceeding from the most macro to the most micro in terms of perspective and applicability however this arbitrary division belies the integration from macro through meso or mid range to micro levels that is apparent in these studies macro approaches typically include wider geographic scopes greater numbers of stakeholders and more complex explanatory factors than micro approaches each chapter adopts one or more particular sustainability world view and then grounds these and the other chapter elements within actual organisations therefore the reader is advised to envision not a one dimensional continuum but rather a circle in which the macro view both feeds back and feeds forward to the micro view this volume addresses a number of intriguing and important sustainable organisation phenomena such as multiple sustainable development perspectives changing environmental politics environmental management systems variations voluntary environmental programme performance complex adaptive systems and environmental technology development additionally several models are suggested such as cultivation capabilities and business ecology frameworks

in the wake of the Exxon Valdez oil spill a conservation trust helped stabilize and regenerate the damaged area when bird habitats along the Platte River were threatened by Grayhills Dam a similar trust came to their rescue and if a family wants to protect its land for future generations establishing a trust may be the best solution for more than a century bequests of land and funds for environmental protection have been common but in recent decades the trusts used to address conservation issues and resolve environmental disputes have diversified and grown significantly this book examines a variety of conservation organizations built on or close to trust principles some government creations some private some combinations of the two to explain how conservation trusts are created and how they work it explores strengths and weaknesses of the trust concept considers the widespread use of land trusts and presents case studies that both illustrate successes and give instructive examples of potential pitfalls drawing on cases from Maine to Hawaii the authors examine the different kinds and configurations of trusts they consider government trusts that blend federal state and local agencies into a single entity or that derive funding from outside legislative and executive channels trusts established by government and private cooperation to share responsibility for jointly held and managed resources and trusts established by private organizations and families for each type they explain why each is created how it operates and whether it has been proven effective they also address the important issue of accountability and consider when a trust is not the answer to a problem as more Americans reject federal control of land in favor of local determination land trusts have become the most popular tool for the preservation of land habitats and species and as the sharing of authority among public private and diverse government partners becomes more prevalent sound guidelines for establishing effective trusts are critical this book shows how the trust template provides an invaluable approach for future conservation efforts and is a primer for anyone involved in environmental management
