as the global population ages the prevalence of neurodegenerative diseases is rising posing significant challenges to healthcare systems artificial intelligence ai and radiomics are emerging as powerful tools in this domain offering innovative methods for

diagnosing monitoring and treating these conditions radiomics enables the extraction of quantitative features from medical images while ai excels at analyzing large datasets and identifying patterns that might be imperceptible to the human eye the integration of these technologies particularly in neuroimaging holds the potential to revolutionize our understanding and management of neurodegenerative diseases the goal of this research is to address the complex challenges posed by neurodegenerative diseases through the application of ai and radiomics specifically we aim to

- 1 identify and validate novel imaging biomarkers for the early detection and monitoring of neurodegenerative disorders
- 2 develop ai driven predictive models to assess disease progression and treatment outcomes enabling personalized healthcare approaches
- 3 utilize machine learning and database mining techniques to analyze extensive health datasets uncovering new insights and correlations specific to neurodegenerative diseases
- 4 evaluate the clinical utility of these technologies in enhancing diagnostic accuracy improving patient outcomes and optimizing healthcare resources
