this book is the culmination of some ten years theoretical and empirical investigation throughout this period we have come into contact with many who have stimulated our thinking some of whom belong to the community of mathematics educators our

membership of that community has challenged us to make sense of some deep issues related to mathematical learning especially the cognitive and pedagogical faces of mathematical meaning making alongside this community we are privileged to have been part of another whose members are centrally concerned both with mathematics and education yet many of them might reject the label of mathematics educators this community has historically been clustered around what is now called the epistemology and learning group at the massachusetts institute of technology their work has focused our attention on cognitive science ethnography sociology artificial intelligence and other related disciplines crucially it has forced our awareness of the construction of computational settings as a crucial component of the struggle to understand how mathematical learning happens we have sometimes felt that few have tried to span both communities indeed an analysis of the references in the literature would we are sure reveal that the two communities have often ignored each other's strengths one reason for writing this book is born of our hope that we might draw together mathematics educators and mathematics educators and assist both communities in recognising that there are insights that might be derived from each other

although current views of cognitive development owe a great deal to jean piaget this field has undergone profound change in the years since piaget's death this can be witnessed both in the influence connectionist and dynamical system models have exerted on theories of cognition and language and in how basic work in cognitive development has begun to influence those who work in applied e.g. educational settings this volume brings together an eclectic group of distinguished experts who collectively represent the full spectrum of basic to applied aspects of cognitive development this book begins with chapters on cognition and language that represent the current zeitgeist in cognitive science approaches to cognitive development broadly defined following a brief commentary on this work the next section turns to more applied issues although the focus here is on arithmetic learning the research programs described have profound implications for virtually all aspects of education and learning the last chapter views cognitive development from the perspective of ethology and evolutionary biology and in so doing provides a theoretical perspective that is novel and in some ways prescient specifically how can our views of cognition incorporate recent work in biology

intended to prepare students for math assessment tests includes 3 diagnostic tests with instruction
