this work presents a goal based model of decision making in which the relative priorities of goals drive the decision process a psychological alternative to traditional decision analysis building on the work of schank and abelson the author uses goals as the basis for a model of interpersonal relations which permits decisions to incorporate personal and adopted goals in a uniform manner the theory is modelled on the vote computer program which simulates congressional roll call voting decisions the vote program expands traditional decision making and simulation models by providing not only a choice but also a natural language explanation in either english or french it simulates real members of congress voting on real bills and producing reasonable explanations the program is consistent with much of the descriptive political science literature on congressional decision making and provides an explicit model of political issues relationships and strategies that converge in voting behavior in developing the vote program the author draws on his own practical experience in politics from four presidential campaigns and the white house given the underlying psychological basis of the program vote can be extended to other decision making domains different from politics another use for the program is to simulate business decisions such as securities analysis as well as mundane decision making such as choosing a college or deciding whether to get a mohawk haircut

in the current fast paced and constantly changing business environment it is more important than ever for organizations to be agile monitor business performance and meet with increasingly stringent compliance requirements written by pioneering consultants and bestselling authors with track records of international success the decision model a

health care systems are complex and as a result it is often unclear what the effects of changes in policy or service provision might be at the same time resources for health care tend to be in short supply which means that public health practitioners have to make difficult decisions this book describes the quantitative and qualitative methods that can help decision makers to structure and clarify difficult problems and to explore the implications of pursuing different options the accompanying cd rom provides the opportunity to try out some of the proposed solutions the book examines models and decision making in health care methods for clarifying complex decisions models for service planning and resource allocation modelling for evaluating changes in systems

decision making is certainly a very crucial component of many human activities it is therefore not surprising that models of decisions play a very important role not only in decision theory but also in areas such as operations research management science

social psychology etc the basic model of a decision in classical normative decision theory has very little in common with real decision making it portrays a decision as a clear cut act of choice performed by one individual decision maker and in which states of nature possible actions results and preferences are well and crisply defined the only component in which uncertainty is permitted is the occurrence of the different states of nature for which probabilistic descriptions are allowed these probabilities are generally assumed to be known numerically i.e. as single probabilities or as probability distribution functions extensions of this basic model can primarily be conceived in three directions 1 rather than a single decision maker there are several decision makers involved this has led to the areas of game theory team theory and group decision theory 2 the preference or utility function is not single valued but rather vector valued this extension is considered in multiattribute utility theory and in multicriteria analysis 3

leaders and managers want quick answers quick ways to reach solutions ways and means to access knowledge that won't eat into their precious time and quick ideas that deliver a big result the little book of big decision models cuts through all the noise and gives managers access to the very best decision making models that they need to to keep things moving forward every model is quick and easy to read and delivers the essential information and know how quickly efficiently and memorably

why do people in a certain group behave the way they do and more importantly what specific criteria was used by the group in question this book presents a method for answering these questions
