intermittent fasting can provide significant health benefits if it is done right including weight loss reversal of type 2 diabetes and many other things plus it can save you time and money it is important to realize that this is normal and humans have evolved to fast for shorter time periods hours or days without detrimental health consequences body fat is merely food energy that has been stored away if you don't eat your body will simply eat its own fat for energy life is about balance the good and the bad the yin and the yang the same applies to eating and fasting fasting after all is simply the flip side of eating if you are not eating you are fasting in essence intermittent fasting allows the body to use its stored energy the important thing to understand is that there is nothing wrong with that that is how our bodies are designed that's what dogs cats lions and bears do that's what humans do if you're eating every third hour as is often recommended then your

body will constantly use the incoming food energy it may not need to burn much body fat if any you may just be storing fat your body may be saving it for a time when there is nothing to eat if this happens you lack balance you lack intermittent fasting
