ecosystem service potentials and their indicators in postglacial landscapes assessment and mapping provides valuable guidance for anyone involved with ecosystem service potential monitoring use and management from landscape ecologists and environmental managers to policymakers and environmental economists the book highlights effective measurement tools for evaluating the overall potential of ecosystem services from multiple perspectives beginning with an introduction to ecosystem services and the theoretical assumptions and objectives associated with their assessment the book goes on to outline interdisciplinary methods of evaluation and analysis that are fully supported and illustrated throughout using an insightful case study focused on wigry national park a range of different spatial reference units are also discussed followed by chapters on both analytical and synthetic approaches to identifying service supply potential in addition the use of services and the impact of these uses on the assessment of potential is included along with a discussion of the future shape of ecosystem service assessment

the idea that nature provides services to people is one of the most powerful concepts to have emerged over the last two decades it is shaping our understanding of the role that biodiverse ecosystems play in the environment and their benefits for humankind as a result there is a growing interest in operational and methodological issues surrounding ecosystem services amongst environmental managers and many institutions are now developing teaching programmes to equip the next generation with the skills needed to apply the concepts more effectively this handbook provides a comprehensive reference text on ecosystem services integrating natural and social science including economics collectively the chapters written by the world's leading authorities demonstrate the importance of biodiversity for people policy and practice they also show how the value of ecosystems to society can be expressed in monetary and non monetary terms so that the environment can be better taken into account in decision making the significance of the ecosystem service paradigm is that it helps us redefine and better communicate the relationships between people and nature it is shown how these are

essential to resolving challenges such as sustainable development and poverty reduction and the creation of a green economy in developing and developed world contexts

this book is a state of the art compilation of the latest information on ecosystem services of agroforestry the last two decades have seen a surge in literature on the ecosystem services of sustainable agriculture practices including that of agroforestry however compilation and synthesis of such information from agroforestry have been limited this book fills that void by bringing in a number of experts from around the world in addition to presenting the multiple dimensions of ecosystem services provided by major agroforestry practices the book also offers case studies from both tropical and temperate regions of the world information from this book can be used to design land management practices for climate change mitigation ecosystem benefits agricultural productivity and sustainability and for survival and profitability of family farms and to conserve biodiversity while synthesizing information of the biophysical aspects of ecosystem services the book also outlines the socioeconomic and policy dimensions including appropriate incentive models to enhance adoption of agroforestry so that society at large can enjoy these important benefits
