known as the jug because of its fuselage shape the republic p 47 thunderbolt flew in every theatre of wwii except alaska nearly 13 000 were built by war s end the large aircraft carrier eight browning machine guns and up to 2 000 lbs of bombs or rockets and proved an effective fighter and bomber the radial pratt and whitney powerplant put out over 2500 h p and propelled the p 47 at a maximum speed of 426 mph at 30 000 feet originally published by the u s army air force this handbook taught pilots everything they needed to know before entering the cockpit this affordable facsimile of a real wwii manual has been reformatted care has been taken to preserve the integrity of the text

the distinctive rugged lines of this heavyweight single seater earned it the nickname the jug but what the thunderbolt lacked in elegance it more than made up for in firepower of the 15 683 thunderbolts built only 54 airframes are known to exist today this book provides a generously illustrated and thoroughly researched tribute to the aircraft

before the p 47 thunderbolt gained a bubble top fairing these fighters had slightly different some claim to be more racial figure in the first versions the plane had a typical canopy built into the fuselage which resulted in a slightly hunched line the first copies of the p 47b underwent a series of tests at the turn of 1941 and 1942 initially they were not very promising one of the planes was lost because of the tail tearing off during the dive in addition at heights above 9144 m the flaps froze it was impossible to open the cabin hood and the forces on the rudders were very big at high speeds the paint covering the elevators fell off and the aerodynamic pressure inflated their sheath they were covered with canvas causing dangerous tail vibrations to remedy these problems metal sheathing was introduced elevators shape was changed and weight flaps were added the propulsion of the p 47b version was a 2000 hp r 2800 21 engine the time to reach the ceiling of 4572 m was 6 7 minutes the aircraft developed a speed of 690 km h at an altitude of 8230 m in horizontal flight which was a great result

the republic p 47 thunderbolt was one of the most heralded and recognizable fighters of world war ii built in larger numbers than any other american fighter aircraft in history a record that will surely never be broken the p 47 evolved during the war from an interceptor design to that of a long range fighter with excellent fighter bomber capabilities from the original razorback p 47b that could not carry any external stores to the bubbletop p 47n with larger wings and the ability to carry a wide array of external fuel tanks and ordnance this book covers every aspect of the fighter that became known as the jug detail scale published its first book on republic s p 47 thunderbolt in 1998 twenty five years later this new publication p 47 thunderbolt in detail scale significantly revises and expands our original coverage of the big radial engine fighter that endeared itself to many pilots as the rugged and survivable aircraft that would bring them home following an introduction the thunderbolt history chapter traces the origins of the thunderbolt covering the previous seversky and republic efforts that led up to its design and development this chapter then continues with how the different production variants from the p 47b through the p 47n improved the capabilities of the aircraft as each succeeding production block and version became operational next is the thunderbolt variants chapter

which takes a closer look at each version of the p 47 in more detail all of the production variants as well as the experimental thunderbolts are included in this informative chapter line drawings that point out important changes and enhancements made to the production variants were drawn specifically for detail scale by Lloyd S Jones the primary focus of the detail scale series of aviation publications is on the details of the aircraft the thunderbolt details chapter has ten different sections that include 170 detail photographs that cover the p 47 in incredible detail both inside and out and from the propeller hub to the position light on the trailing edge of the rudder the large majority of these photographs are in color and most were taken by the author specifically for the original book and for this publication to ensure that every possible detail would be illustrated no less than ten different p 47s were photographed as with all detail scale series books our modelers section provides coverage of the scale model kits of the thunderbolt in the quarter century since our original book on the jug was published a considerable number of new kits have been released and reviews of these have been added to the modeler section kits in all popular standard modeling scales from 1/144th through 1/24th scales are included p 47 thunderbolt in detail scale has more than 260 photographs over 190 of which are in color 11 drawings and 9 color profiles

since the end of world war 2 the tactical air war over europe has been largely overlooked by historians and authors alike in favour of analysis of the higher profile strategic bombing campaign involving just as many aircraft as the daylight heavy bombing campaign the fighter bombers principally of the ninth air force wreaked considerably more havoc on german ground forces indeed thunderbolt units undertaking such missions effectively complemented the strategic campaign ensuring the defeat of nazi germany p 47 pilots paid a high price to achieve this victory however as the german flak arm was well equipped nearly a quarter of all war related production was devoted to anti aircraft weaponry with weapons of various calibres to counter tactical air power s low to medium altitude threat the usaaf four numbered air forces that saw action over the european continent suffered significant fighter bomber losses to flak the principle fighter bomber from the summer of 1944 through to ve day was the p 47d with both dedicated ground attack units and squadrons that had completed their bomber escort tasking seeking out targets of opportunity across occupied western europe while heavy calibre anti aircraft fire was intended to both shoot down enemy aircraft and force bombers to drop their ordnance sooner or from higher altitudes thus reducing bombing accuracy low altitude flak batteries put up a virtual wall of steel for enemy fighter bombers to fly through damaging a low flying fighter bomber made it easier for other flak gunners to track

engage and destroy it innovations like lead computing gunsights gave gunners a higher probability of intercepting low altitude fighters conversely the appearance of air to ground rockets beneath the wings of p 47s gave pilots better standoff range and a harder hitting punch when dealing with low and medium altitude flak units this volume analyses the tactics and techniques used by both p 47 fighter bomber pilots and german flak gunners featuring full colour illustrations to examine the allied tactical air power in europe from 1943 and how german defences were overpowered by the air threat

when the united states army signal corps created the aeronautical division in august 1907 it had a mission to take charge of all matters pertaining to military ballooning air machines and all kindred matters that small inconsequential portion of the us army would grow progressively over the many decades to become a separate service named the us air force in 1947 following the second world war overnight it became the worlds most powerful military establishment able to deliver conventional and nuclear ordnance anywhere around the globe todays cutting edge example of this power projection is the supersonic bat winged b 2 spirit stealth bomber which can fly at an altitude of 50 000 feet and is built of carbon graphite composite materials the b 2 spirit is a far cry from the early days of the service when it relied on fragile prop driven wood and fabric aerial platforms such as the wright type b which could barely reach an altitude of 100 feet in between have been such iconic second world war aircraft as the p 51 mustang and p 47 thunderbolt fighters and bombers such as the b 25 mitchell b 17 flying fortress and b 29 superfortress which dropped the first a bomb in 1945 the cold war demanded ever more powerful aircraft such as the b 58 hustler and b 52 stratofortress and fighters including the f 86 sabre f 104 starfighter and f 4 phantom all these aircraft and more are vividly illustrated and described in detail in this superb images of war publication
