as audio and telecommunication technologies develop there is an increasing need to evaluate the technical  
and perceptual performance of these innovations a growing number of new technologies e g low bit rate  
coding are based on specific properties of the auditory system which are often highly non linear this means  
that the auditory quality of such systems cannot be measured by traditional physical measures such as  
distortion frequency response etc but only by perceptual evaluations in the form of listening tests perceptual  
audio evaluation provides a comprehensive guide to the many variables that need to be considered before  
during and after experiments including the selection of the content of the programme material to be  
reproduced technical aspects of the production of the programme material the experimental set up including  
calibration and the statistical planning of the experiment and subsequent analysis of the data perceptual audio  
evaluation provides a complete and accessible guide to the motives theory and practical application of  
perceptual evaluation of reproduced sound discusses all the variables of perceptual evaluation their control  
and their possible influence on the results covers in detail all international standards on the topic is illustrated
