thomas pavittes amazing 1 000 dot to dot books brought a fresh spirit to a classic pastime and have sold hundreds of thousands of copies worldwide now he unveils an even more original and amazing concept querbles the puzzling colouring book at first glance the querbles are nothing but a seemingly random arrangement of

Indecipherable overlapping circles but cunningly hidden within each one is a famous face waiting to be revealed. You can keep it simple and use one pen or pencil or you can go colourful with felt tips or paints. The principle is no more complicated than the colour by numbers books that kids love. The results, however, are unexpected, graphic and sensational, and there's the thrill of discovery every time. 20 great portraits of well-known faces from the Mona Lisa to Che Guevara will come to life and each can easily be removed from the oversized book, framed and displayed.

Sensory experience seems to be the basis of our knowledge and conception of mind-independent things. The puzzle is to understand how that can be even if the things we experience—apples, tables, trees, etc.—are mind-independent. How does our sensory experience of them enable us to conceive of them as mind-independent? George Berkeley thought that sensory experience can only provide us with the conception of mind-dependent things, things which cannot exist when they aren't being perceived. It's easy to dismiss Berkeley's conclusion but harder to see how to avoid it. In this book, John Campbell and Quassim Cassam propose very different solutions to Berkeley's puzzle. For Campbell, sensory experience can be the basis of our knowledge of mind-independent things because it is a relation more primitive than thought between the perceiver and high-level objects and properties in the mind-independent world. Cassam opposes this relationalist solution to the puzzle and defends a representationalist solution: sensory experience can give us the conception of mind-independent things because it represents its objects as mind-independent but does so without presupposing concepts of mind-independent things. This book is written in the form of a debate between two rival approaches to understanding the relationship between concepts and sensory experience. Although Berkeley's puzzle frames the debate, the questions addressed by Campbell and Cassam aren't just of historical interest; they are among the most fundamental questions in philosophy.
