seminar paper from the year 2012 in the subject energy sciences grade 1 5 language english abstract the energy efficiency targets of the federal government are important parameters deciding upon the amount of energy we will need in the future and hence about the storage capacities we will require the reduction of the primary energy consumption by 20 until 2020 and 50 until 2050 towards 2008 s figures the reduction in electricity consumption by 10 until 2020 and 25 until 2050 the doubling of the rate of refurbishment from 1 to 2 per year and the reduction of the end energy consumption in the mobility sector by 10 until 2020 and 40 by 2050 towards 2005 s consumption will change the energy market substantially for instance houses will need less electricity for their devices and less gas for heating load profiles will smoothen and passenger and freight traffic will switch from petrol engines to electric and gas engines fuel cells or will switch to rail in germany the market structure has been designed to enhance and facilitate the development of renewable energies through the renewable energies act eeg and the energy economy law enwg and actually in 2011 the share of renewables in the electricity production totalled to over 20 and is expected to rise over 25 this year whereby especially the photovoltaic is booming with growth rates of nearly 50 the evolutions are certainly pleasant still the very quick development of these mostly decentralised and location dependent energy sources is making the

market framework conditions come to its limits the transmission grid capacities are not large enough to transfer the huge amounts of wind energy from the north to the south and the distribution grid is often too weak to feed in the large amounts of photovoltaic energy in the midday these restrictions have caused 407 gwh of wind energy to get lost in 2011 150 gwh in 2010 a small but exploding figure and a valid argument for storage capacities this shows that the whole of the energy market has to be evaluated and diverse scenarios for the future have to be created to forecast the development into one specific area additionally because of the dynamic of this market these analyses and forecasts have to be updated continuously in the context of these recent events and developments the following paper will discuss how the need for storage capacities could be met by the power to gas technology noting the need for flexibility close market maturity and economic affordability
