serving the needs of pigment cell biologists cellular physiologists developmental geneticists researchers interested in melanoma and more this new book showcases a blend of new technologies and new insights in the field of pigmantary genetics of mice with comparative information on other animals graduate students can learn here the terminology and scope of the field and animal fanciers can discover the genetics behind common color variants of mammals the book is hailed for being written by four of the premier scientists in the field these authors aim to present the molecular cellular work in the context of phenotype and the interacting functions of genes that direct the development and function of one biological system for other researchers the depth of genetic knowledge on the pigmantary system makes it a valuable

model for the study of other systems

molecular genetics of inherited eye disorders provides an authoritative and up to date account of molecular genetic advances in a wide spectrum of genetic eye disorders and forms the second volume in the modern genetics book series the field has produced some dramatic and often unexpected findings in recent years ranging from the elegant unravelling of the molecular basis of colour vision defects to the subtle complexity of the retinoblastoma gene the role of crystallins in congenital cataract and of the rhodopsin molecule in retinitis pigmentosa are discussed illustrating the importance of the candidate gene approach to genetic eye disease reverse genetic approaches to the cloning of genes responsible for aniridia and choroideremia exemplify the power of the new genetic techniques and signal the start of the next experimental phase in which the functional characterization of identified genes begins

the purpose of the first four volumes of the handbook of genetics is to bring together collections of relatively short authoritative essays or annotated compilations of data on topics of significance to geneticists many of the essays will deal with various aspects of the biology of certain species or species groups selected because they are favorite subjects for genetic investigation in nature or the laboratory often there will be an encyclopedic amount of information available on such species with new papers appearing daily most of these will be written for specialists in a jargon that is bewildering to a novice and sometimes even to a veteran geneticist working with evolutionarily distant organisms for such readers what is needed is a written introduction to the morphology life cycle reproductive behavior and culture methods for the species in question what are its particular advantages and disadvantages for genetic study and what have we learned from it where are the classic papers the key bibliographies and how does one get stocks of wild type or mutant strains lists giving the symbolism and descriptions for selected mutants that have been retained and are thus available for future studies are provided whenever possible genetic and cytological maps mitotic karyotypes and haploid dna values are also included when available volume 4 deals with certain vertebrate species that have been studied in considerable detail from the standpoint of genetics or molecular cytogenetics such data are available for only a relatively few vertebrates

in a land where the sword decided who lived and who died came an almost unstoppable force this force ripped through a once peaceful land the beauty that once covered the hillside was now ravished by fire and the smell of death and destruction creatures that once lay dormant were now roaming the lands leaving nothing but horror in their wake then

out of nowhere a champion takes the lead on the battle to restore peace and beauty back to the land he loved more than life itself man had no chance until he showed himself he and the men who banded with him brought peace back to the land a peace that did not last long an unexpected force that rose up and took the place of the evil that for a year had possessed the land once again this champion stepped up to bring this evil that once again threatened his people as well as the land he loved and called home its time was long ago and still the battle lingers on as if it will last forever
