diploma thesis from the year 2001 in the subject electrotechnology grade 1 7 university of ulm 34 entries in the bibliography language english abstract in today s world there are mainly two types of communication networks circuitswitched networks and packet switched networks the current telephone networks are mostly based on the circuit switched networks whereas the internet is mainly based on the packetswitched networks which are also called ip networks however there is a strong tendency to combine both of these networks which points to the direction that the ip networks are going to replace services provided by current telephone networks this would eventually mean that ip networks might replace the telephone networks in the future following are some reasons why ip networks seem to replace the circuit switched networks first of all the ip networks provide cheaper communication considering that the internet access is nearly free the cost advantage of ip networks gets clearer 25 secondly ip networks provide the ability of integrating the data and voice applications and even some other applications like video conferencing integrated voice mail e mail and the like 26 another important reason is that ip networks allow open implementation of end systems with a reasonable programming knowledge everybody could implement an end system for ip networks in the classical telephony end users cannot implement any end system but have to use whatever provided by the service providers 27
