a new edition of the classic text on optimal control theory as a superb introductory text and an indispensable reference this new edition of optimal control will serve the needs of both the

professional engineer and the advanced student in mechanical electrical and aerospace engineering its coverage encompasses all the fundamental topics as well as the major changes that have occurred in recent years an abundance of computer simulations using matlab and relevant toolboxes is included to give the reader the actual experience of applying the theory to real world situations major topics covered include static optimization optimal control of discrete time systems optimal control of continuous time systems the tracking problem and other lqr extensions final time free and constrained input control dynamic programming optimal control for polynomial systems output feedback and structured control robustness and multivariable frequency domain techniques differential games reinforcement learning and optimal adaptive control

one of the goals of artificial intelligence ai is creating autonomous agents that must make decisions based on uncertain and incomplete information the goal is to design rational agents that must take the best action given the information available and their goals decision theory models for applications in artificial intelligence concepts and solutions provides an introduction to different types of decision theory techniques including mdps pomdps influence diagrams and reinforcement learning and illustrates their application in artificial intelligence this book provides insights into the advantages and challenges of using decision theory models for developing intelligent systems

edugorilla publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources specializing in competitive exams and academic support edugorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels

the frontiers of consciousness is a truly interdisciplinary volume on consciousness one which tackles some of the biggest and most impenetrable problems in the field distinctive in its accessibility authority and its depth of coverage the book is a groundbreaking and influential addition to the consciousness literature

the past decade has seen a revolution in the field of spoken dialogue systems as in other areas of computer science and artificial intelligence data driven methods are now being used to drive new methodologies for system development and evaluation this book is a unique contribution to that ongoing change a new methodology for developing spoken dialogue systems is described in detail the journey starts and ends with human behaviour in interaction and explores methods for learning from the data for building simulation environments for training and testing systems and for evaluating the results the detailed material covers spoken and multimodal dialogue systems wizard of oz data collection user simulation methods reinforcement learning and evaluation methodologies the book is a research guide for students and researchers with a background in computer science ai or machine learning it navigates through a detailed case study in data driven methods for development and evaluation of spoken dialogue systems common challenges associated with this approach

are discussed and example solutions are provided this work provides insights lessons and inspiration for future research and development not only for spoken dialogue systems in particular but for data driven approaches to human machine interaction in general

this book constitutes revised and selected papers of the 9th european workshop on reinforcement learning ewrl 2011 which took place in athens greece in september 2011 the papers presented were carefully reviewed and selected from 40 submissions the papers are organized in topical sections online reinforcement learning learning and exploring mdps function approximation methods for reinforcement learning macro actions in reinforcement learning policy search and bounds multi task and transfer reinforcement learning multi agent reinforcement learning apprenticeship and inverse reinforcement learning and real world reinforcement learning

this book pretends to bring the state of art research results on advanced control from both the theoretical and practical perspectives the fundamental and advanced research results as well as the contributions in terms of the technical evolution of control theory are of particular interest this book can serve as a bridge between people who are working on the theoretical and practical research on control theory and facilitate the proposal of development of new control techniques and its applications in addition this book presents educational importance to help students and researchers to know the frontiers of the control technology
