the alkaline igneous rocks and carbonatites are compositionally and mineralogically the most diverse of all igneous rocks and apart from their scientific interest are of major and growing economic importance they are important repositories of certain metals and commodities indeed the only significant sources of some of them and include nb the rare earths cu v diamond phosphate vermiculite bauxite raw materials for the manufacture of ceramics and potentially th and u the economic potential of these rocks is now widely appreciated particularly since the commencement of the mining of the palabora carbonatite for copper and a host of valuable by products similarly the crucial economic dominance of rare earth production from carbonatite related occurrences in china has stimulated the world wide hunt for similar deposits this volume describes and provides ready access to the literature for all known occurrences of alkaline igneous rocks and carbonatites of antarctica asia and europe excluding the former ussr australasia and oceanic islands more than 1 200 occurrences from 59 countries are outlined together with those of 57 oceanic islands and island groups the descriptions include geographical coordinates and information on general geology rock types petrography mineralogy age and economic aspects with the principal references cited there are 429

this is the third in the five yearly series of surveys of what is happening in rock art studies around the world as always the texts reflect something of the great differences in approach and emphasis that exist in different regions the volume presents examples from europe asia africa and the new world during the period in question 1999 to 2004 there have been few major events although in the field of pleistocene art many new discoveries have been made and a new country added to the select list of those with ice age cave art some regions such as north africa and the former ussr have seen a tremendous amount of activity focusing not

only on recording but also on chronology and the conservation of sites with the global increase of tourism the management of rock art sites that are accessible to the public is a theme of ever growing importance

this book contains peer reviewed papers from the second world landslide forum organised by the international consortium on landslides icl that took place in september 2011 the entire material from the conference has been split into seven volumes this one is the sixth 1 landslide inventory and susceptibility and hazard zoning 2 early warning instrumentation and monitoring 3 spatial analysis and modelling 4 global environmental change 5 complex environment 6 risk assessment management and mitigation 7 social and economic impact and policies

volume 69 of reviews in mineralogy and geochemistry covers the fundamental issues of volcanology at what depths are eruptions triggered and over what time scales where and why do magmas coalesce before ascent if magmas stagnate for thousands of years what forces are responsible for initiating final ascent or the degassing processes that accelerate upward motion to the extent that we can answer these questions we move towards formulating tests of mechanistic models of volcanic eruptions e g wilson 1980 slezin 2003 scandone et al 2007 and hypotheses of the tectonic controls on magma transport e g ten brink and brocher 1987 takada 1994 putirka and busby 2007 our goal in part is to review how minerals can be used to understand volcanic systems and the processes that shape them we also hope that this work will spur new and integrated studies of volcanic systems
