the conflict in sudan which started in april 2023 has led to severe economic repercussions sharply reducing the country s gross
 domestic product gdp employment and household incomes and increasing the prevalence of poverty using an updated economywide
 database for sudan we ran an analysis of the likely economic impact of a continuation of the conflict through to the end of 2024 using
 two scenarios of extreme and moderate reductions in overall gdp these reductions are triggered mainly by the ongoing conflict which
 is causing additional cuts in the operations of business services and continuing disruptions to wholesale and retail services and
 manufacturing the results of the analysis show a 47 percent decline in sudan s gdp under the extreme reduction scenario and a 13
 percent decline under the moderate scenario relative to 2022 before the conflict began under the extreme scenario the agrifood
 system gdp falls by 26 percent and employment by 50 percent with non farm jobs being more adversely affected household incomes
 decline significantly across all quintiles and in both rural and urban areas with urban and richer households facing slightly higher
 reductions less educated labor categories are severely affected while tertiary educated labor shows relative resilience poverty rates

have surged particularly in rural areas and among women with the national poverty rate estimated to have increased by 21 percentage points under the extreme reduction scenario to mitigate the widespread adverse impacts of the conflict on the sudanese economy and foster long term resilience policies and interventions should prioritize the restoration of economic productivity provide support for the agrifood system and employment recovery strategies and ensure that social protection measures are accessible to all households facing increased deprivation

this essay sheds light on what is gross domestic product demystifies what are the unfavorable economic policies in the economy that adversely impact the gdp growth rate in the economy and expounds upon how implementing favorable economic policies in the economy can increase the gdp growth rate in the economy succinctly stated gross domestic product is the total monetary value of all the products and services produced within a nation s borders in a specific time period such as a time span of one year the gross domestic product of an economy can be further amplified if the real private sector workforce in an economy is able to amplify the product production volume in an economy the real private sector workforce in an economy has the latent potential to further amplify the product production volume even if the size of the real private sector workforce in an economy remains constant the gross domestic product of an economy can nonetheless be further amplified if more companies in an economy harness artificial intelligence powered technologies in their product manufacturing operations leveraging robust artificial intelligence powered technologies such as robust artificial intelligence powered industrial robots and robust artificial intelligence powered generative tools can aid companies in being able to significantly amplify their product production output in an economy furthermore leveraging robust artificial intelligence powered technologies such as robust artificial intelligence powered industrial robots and robust artificial intelligence powered generative tools can also aid companies in being able to minimize their labor costs the gross domestic product of an economy also can be further amplified if the real private sector workforce in an economy is able to amplify the service production volume in an economy the real private sector workforce in an economy also has the latent potential to further amplify the service production volume even if the size of the real private sector workforce in an economy remains constant the gross domestic product of an economy can nonetheless be further amplified if more companies in an economy harness artificial intelligence powered technologies

in their service operations leveraging robust artificial intelligence powered technologies such as robust artificial intelligence powered virtual assistants and robust artificial intelligence powered autonomous vehicles can aid companies in being able to significantly amplify their service production output in an economy furthermore leveraging robust artificial intelligence powered technologies such as robust artificial intelligence powered virtual assistants and robust artificial intelligence powered autonomous vehicles can also aid companies in being able to minimize their labor costs moreover leveraging robust artificial intelligence powered technologies such as robust artificial intelligence powered virtual assistants and robust artificial intelligence powered autonomous vehicles can also aid companies in their endeavor to further enhance their service offerings there are a surfeit of unfavorable economic policies in the economy that adversely impact the gross domestic product growth rate in the economy a controlled market economy is also an economy that has a cornucopia of unfavorable economic policies in a controlled market economy the type of demand for products and services is involuntary demand this is because in a controlled market economy people lack purview over how all of their money is expended furthermore in a controlled market economy there are an exorbitant amount of evisceration fees that are imposed by bureaucratic apparatuses in this controlled market economy there are an exorbitant amount of evisceration fees that are imposed by bureaucratic apparatuses which people who work real private sector employee jobs based on voluntary demand pay and do not receive anything for paying it is more cumbersome for a person to be able to elevate his standard of living if he lacks purview over how all of his hard earned money is expended in a controlled market economy people also lack purview over how all of their sacrosanct time is earmarked

essay from the year 2014 in the subject business economics general language english abstract this paper assesses the thirwall s balance of payment bop constrained model by applying it on the nigerian economy and employing cointegration method to observe the relationship between economic growth and current account balance equilibrium while extensive research study on economic growth concentrate on the neoclassical supply oriented approach based on the production function and full employment harrod 1939 emphasized that demand generated growth determine long run economic growth and thirwall developed a keynesian perspective of the determinants of growth embedded on a dynamic version of the harrod s foreign trade multiplier thirwall pinpoints the incapability

of economic agents to increase aggregate demand indefinitely in open economies as justification for income growth differences across nations the balance of payment constrained growth model states that a country's economic growth rate is constrained by the desire to generate foreign exchange and reiterate the function of demand as the motivation for domestic growth this arises because growth in export and investment growth in import substitution are the only aspect of aggregate demand that can increase gdp growth and reduce foreign constraints this implies that growth rate is constrained by the balance of payment as the economy cannot grow faster than what is consistent with the balance of payment equilibrium the principle of this keynesian demand side growth theory is that export capability and import attitude establish long run economic growth income derived from external trade constitute the principal medium to finance growing import due to a rise in domestic activities this model differ from the supply induced growth models which evaluate economic growth by using factor inputs such as savings human and physical capital population growth and initial per capital gdp on economic growth reservations about the traditional growth models stem from the fact that the factor inputs have inconclusive roles in the growth process in developing countries also a lot of the neoclassical assumptions have been observed to be unapplicable in developing or transition economies the balance of payment constrained model infer that economic growth are stimulated by demand factors and the main constraint on demand is the balance of payment
