nothing tends so much to the advancement of knowledge as the application of a new instrument sir humphry davy 1778 1829 neuroscience has become a rapidly expanding endeavor that relies on a number of other sciences such as mathematics physics chemistry engineering computer science general biology and medicine genetics etc in fact many of its recent successes result from the application of ideas and methods borrowed from these fields insofar it is a true interdisciplinary undertaking this convergence of influences accounts for part of its enormous attractiveness and fascination to students and researchers from diverse walks of life or science for that matter it is probably fair to say that a great number of neuroscience s most creative and productive proponents have been lured into this

field not only by the excitement about the possibility to unmask the secrets of the human mind but also by the appeal of a vast unknown land needing cultivation and tools to cultivate it. Danger may arise for any science if it is dominated by methods and techniques of investigation rather than by problems to be solved and concepts to be developed. This might concentrate efforts onto the technically feasible and doable rather than on the real issues. But on the other hand, especially the young and growing sciences are heavily dependent on the development and application of methods. Often even before a problem relying on these methods may become apparent.

With the New Deal came a dramatic expansion of the American regulatory state threatening to undermine many of the traditional roles of the legal system and its actors by establishing a system of administrative law. The new emphasis on federal legislation as a form of social and economic planning ushered in an era of legal uncertainty. In this study, Ronen Shamir explores how elite corporate lawyers and the American Bar Association clashed with academic legal realists over the constitutionality of the New Deal's legislative program. Applying the insights of Weber and Bourdieu to the sociology of the legal profession, Shamir shows that elite members of the bar had a keen self-interest in blocking the expansion of administrative law. He dismisses as oversimplified the view that elite lawyers were hired guns who argued that New Deal legislation was unconstitutional solely because of their duty to represent their capitalist clients. Instead, Shamir suggests their alignment with the capitalist class was an incidental result of their attempt to articulate their vision of the law as scientific, apolitical, and judicially oriented and thereby to defend their own position within the law profession. The academic legal realists, on the other side of the constitutional debates, criticized the rigidity of the traditional judicial process and insisted that flexibility of interpretation and the uncertainty of legal outcomes was at the heart of the legal system. The author argues that many legal realists, encouraged by the experimental nature of the New Deal, seized an opportunity to improve on their marginal status within the legal profession by moving their discussions from academic circles to the national policy agenda.
