this book offers readers a comprehensive overview and an in depth understanding of suitable methods for quantifying and characterizing saline aquifers for the geological storage of co₂ it begins with a general overview of the methodology and the processes that take place when co₂ is injected and stored in deep saline water containing formations it subsequently presents mathematical and numerical models used for predicting the consequences of co₂ injection this book provides descriptions of relevant experimental methods from laboratory experiments to field scale site characterization and techniques for monitoring spreading of the injected co₂ within the formation experiences from a number of important field injection projects are reviewed as are those from co₂ natural analog sites lastly the book presents relevant risk management methods geological storage of co₂ is widely considered to be a key technology capable of substantially reducing the amount of co₂ released into the atmosphere thereby reducing the negative impacts of such releases on the global climate around the world projects are already in full swing while others are now being initiated and executed to demonstrate the technology deep saline formations are the geological formations considered to hold the highest storage potential due to their abundance worldwide to date however these formations have been relatively poorly characterized due to their low economic value accordingly the processes involved in injecting and storing co₂ in such formations still need to be better quantified and methods for characterizing modeling and monitoring this type of co₂ storage in such formations must be rapidly developed and refined

this book covers the various ways in which rivers discharge water and sediment load which is characteristic of the current situation caused by both human activity and the natural riverine environment the knowledge of river inclinations and flow patterns points to more river ecosystem management and current multifaceted conditions technology advancements in river watershed studies have demonstrated the difference between natural river systems and human influenced hydrological environments and surface processes lastly the relationship between river systems and modern activity is impacted by climate change which is also discussed in this volume this edited book is organized into four parts each discussing a different aspect of modern river science for watershed management including gis and hydrogeological applications rainfall runoff modeling that is up to date hydrological processes

artificial intelligence and gis moreover it provides a wealth of information about watershed management particularly for researchers and experts in the hydrogeological field it covers advanced applications of river morphometric dynamics conditions flood risk assessment sediment load discharge and their flux measurements as well as field oriented aspects of the river environment and gis the book can be used to update current river science studies and to expand scientific understanding for projects related to studies the edited book is primarily intended for postgraduate students researchers and experts and practitioners in the fields of hydrology field hydrogeology water resource exploration dam studies and groundwater potential investigation it is also intended for young researchers scholars and practitioners working in the field of water resource exploration
